Foreword

Education is currently becoming the most important contributor to national economic growth and it is the bridge to come in realizing “Universal Primary Education” with the specific target of ensuring it by 2015, of that, children everywhere boys and girls alike, will be able to complete a full course of primary schooling. Above everything, for it is believed by our government that, education is the basis for millennium development goals in order to eradicate poverty.

Accordingly, this document would definitely meet the interest of planners, policy makers, researchers, educational stakeholders and analyzers in obtaining information for their decision. Besides, this annual educational abstract would enable educational planners and policy makers in targeting their future goals in terms of our educational standard by allocating the needed resource for improving and implementing quality of education.

Therefore, this Education Statistic Annual Abstract is gives emphasis to the provision of relevant and articulated information on all levels of education taking place in our region for implementation of millennium development goal in education sector. The charts, graphs and tables in this publication present a relevant and accurate picture of our progress on an annual basis. In presenting this overview, we are allowing the key partners and stakeholders to see at a glimpse how quickly the changes have taken place in our Region.

Introduction

Education Statistics Annual Abstract is the document that addressing educational information for the concerned bodies, in order to make know them the performance of our education on a yearly basis. The education performance indicator presented in this document is calculated based on the projected school age population of Central Statistics Agency population and housing census held in 2006/07 G.C and the regional population growth rate is also taken from the Oromia Region Finance and Economic Development Bureau statistic department.

This publication has been written by Oromia Education Bureau EMIS team, with the significant support and cooperation of the thousands of school educationist who submitted documentation of educational statistics from the school up to zone education office. Data was collected based on standard questionnaires designed for pre-primary (KG), Alternative Basic Education, Primary and Secondary education and Integrated Functional Adult Literacy program. This annual abstract contains both descriptive and analytical summaries of equitable access, quality and efficiency of education of our education Bureau in detail. The data are further disaggregated by the level of education, gender, and localities in order to show detailed educational information of the region. Accordingly, we hope that this publication may provide a basis for monitoring the system and having educational information for policy makers, planners and also references for researchers as well.

Finally EMIS team want to thank all of our staffs who are involved in data collection, data entry and verification for this publication starting from the school up to the zonal level, because the data collection, entry and verification would not have been possible without the important contributions of them. A special note of thanks is also reserved for all experts of our regional bureau planning and project work process, for their cooperative effort on the publication of this abstract.

1. Pre Primary Education Program

Pre-primary Education is basically includes children of age 4-6 enrollment. The program is the initial stage of organized instruction to provide a bridge between home and school. The main purpose of early child hood education is to develop the mental and physical capability of the children.

Non- governmental organizations, communities, private institutions and faith based organizations are the operators of kindergarten program. Whereas, government is involved in developing curriculum, training teachers and providing supervisory supports for kindergarten program. Additionally, our Regional Government Education Bureau was involved on pre-primary attached to primary schools (PPAPS) program since 2001 E.C (2008/9 G.C), to access rural children of the level.

Accordingly, participation of pre-primary education has been continuously increasing in our region, since “PPAPS” were implemented. So that, children enrollment in pre- primary schools were increased from year to year, the Gross Enrolment Ratio (GER) of the level also jumped from 3.4% (2001E.C) to 15.1% (2005 E.C) with Average Annual Growth Rate of 45.1% in the last five years interval.

As indicated on chart 1.1, the number of kindergartens raised in between 2001 E.C and 2005 E.C, from 967 to 1350. Whereas, as shown from table 1.1, 7244 government primary schools are implementing 6722 PPAPS and 472 Child to Child program in the region in 2005 E.C.

1.1. Gross Enrolment Ratios in Pre-primary Education

GER of pre-primary education is defined as the percentage of total number of children in the level out of total population of 4-6 age, irrespective of age groups in the region or in a given zones.

As shown from Table 1.2, the Gross Enrolment Rate (GER) for Kindergarten (KG), Pre-Primary attached to Primary schools (PPAPS), and the aggregated of both KG and (PPAPS) was 4.35%, 9.62% and 13.97%; and their GPI are also (0.97, 0.92 & 0.94) respectively. As indicated on the same table, when we compare GER and GPI of the zone to the regional average, GER of 7 zones and all Administrative towns are greater than the regional average. Whereas, regarding to gender equity 5 administrative towns and 7 zones are also greater than that of the regional aggregated GPI. Additionally chart 1.2. is also indicating GER of preprimary education by zone in the year 2011/12.

As we can compare the growth rate of GER of Kindergarten and Pre-primary attached to primary schools of the past five years from chart 1.3, it was varied randomly. However, GER of 2005 E.C has a little bit increment than 2004. As indicated in the chart GER of (2004-2005 E.C) is (14% and 15.1%) respectively. As the data indicates the issue needs attention from concerned body, because million of (4-6 age) group children in the region are still out of pre-primary school.

2. Primary Education Program

2.1. EQUITABLE ACCESS

In Ethiopia, primary education is defined as education in Grades 1-8 in two cycles 1st cycle, (grades 1-4) and 2nd cycle (grades 5-8). The program is normally designed on a unit or project based on basic education to develop pupils' ability to obtain and use information they need, about their home, environment/community or country.

2.1.1. Intake Rates

Intake rate is used to indicate the extent of new entrants to the first grade of primary education. It indicates the proportion of children who join the primary education system for the first time in terms of official school age for the first grade. It compares children who come to school for the first time, registered at first grade (grade 1) with children of official school admission age (7 years old children). Under this umbrella Apparent Intake Rate (AIR), Net Intake Rate (NIR), Early Starters and Late Starters are analyzed.

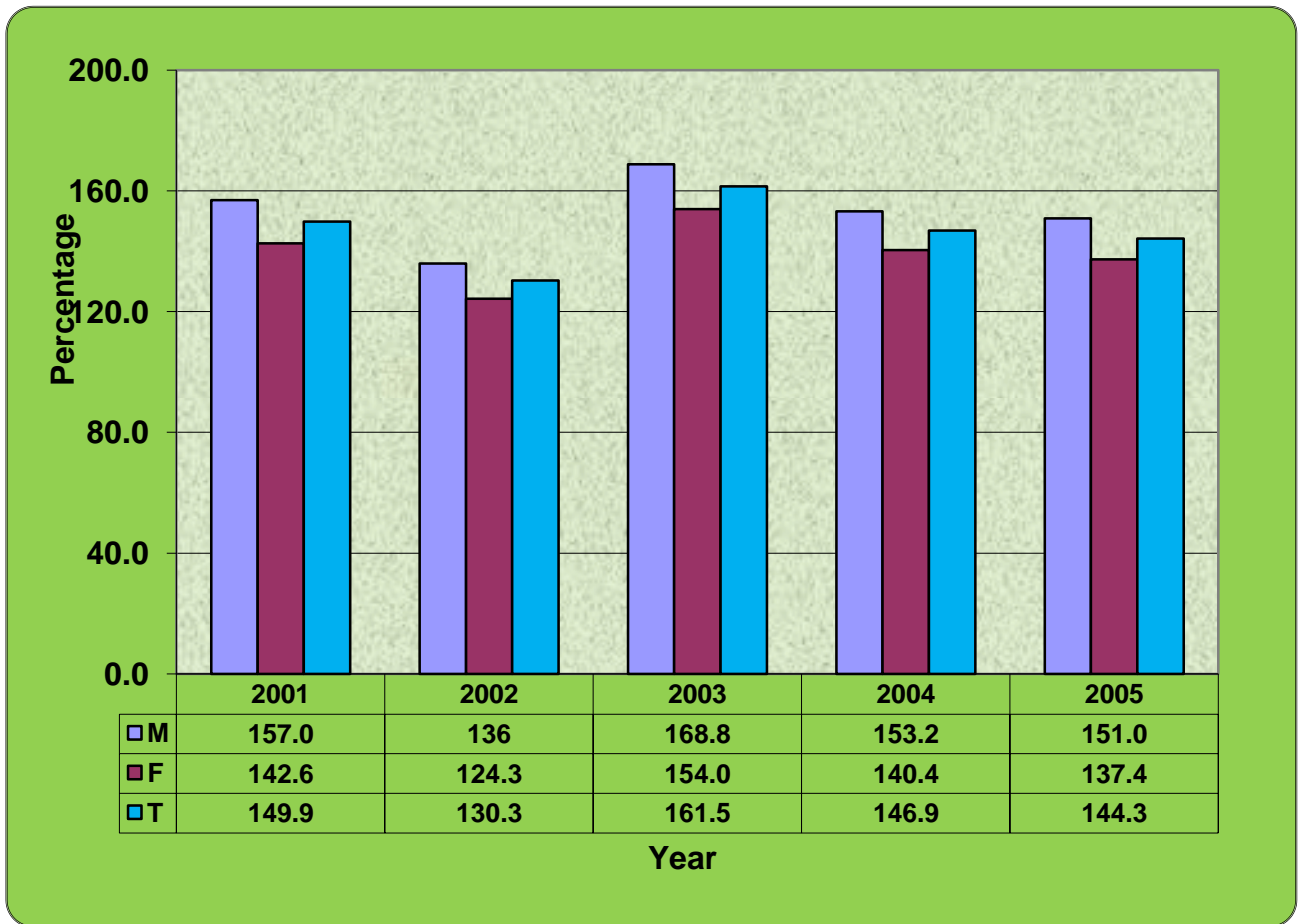

2.1.1.1. Apparent Intake Rate (AIR)

AIR is the percentage of new entrants (irrespective of age) in Grade 1, out of the total number of children of the official primary admission age 7, in a given year. Same times, it is also called the Gross Intake Rate (GIR). AIR tends to reflect those students, who may have not been enrolled in school at the appropriate age, and often reflects the “backlog” of students who could not enrolled before.

A high Apparent Intake Rate indicates a high degree of access to the first grade of primary education. The calculation includes all new entrants to first grade (regardless of age). The Apparent Intake Rate can be more than 100%, due to over- and under-aged children entering primary school for the first time, and this makes inconsistencies in population data. Here is the formula to calculate AIR.

$$\text{AIR} = \frac{\text{Number of New Entrants in first Grade}}{\text{Population at the official school - entrance age}} \times 100$$

Chart 2.1.1.1.1 AIR of the Region in the Last Five Years (2001-2005 E.C)

As shown in chart 2.1.1.1.1 above, AIR of the region was greater than 100% for the last five years; it is because of over and under age children of the enrolment. Additionally, one can observe from the indicated data shown that, AIR of boys is greater than that of girls, and this indicates that the access to grade 1 is still more accessible for boys than girls. Even though the reason has to be identified through research, the AIR has been fluctuating from year to year. For example, it was 130.3% in 2002 E.C and then rose to 161.5% in the following year, however in 2005 E.C, it decline by 17.2% when compared to the previous year and reached to 144.3%. This indicates that, there are children in the system, which have not been enrolled in schools until this year, and often reflects the “backlog” of children who could not enrolled before.

Table 2.1.1.1.1: AIR and Equity Indicators by zones, 2005 EC (2012-2013 G.C.)

30	Wellega West	126.4	119.2	122.8	146.6	148.0	147.3	128.36	122.07	125.24	0.95	0.83	6.3	24.5
	Total Oromia	147.83	132.61	140.33	176.85	175.90	176.38	150.96	137.36	144.25	0.91	0.80	13.60	36.05

As indicated from table 2.1.1.1.1 it is possible to see that, AIR of Oromia in 2005 (2012/13) is **144.3% (M=151.0% and F=137.4%)**. As we can see from the table, almost all zones and administrative towns have AIR greater than 100%. Concerning to GPI seven zones have GPI less than that of the regional average (0.92). Additionally by this year **1,413,991 (M=749,899, and F=664,092)** children were enrolled as new entrants in grade 1, among them **892,105 (M=467,706 and F=424,399)** are 7 years old.

The table also indicates the level of Urban/Rural disparity by zone. Among all zones and twelve administrative towns of the region, only seven of them have RUPI (Rural Urban Parity Index) greater than the regional average of 0.80 of GPI.

2.1.1.2. Net Intake Rate (NIR)

Net Intake Rate shows new entrants in the first grade of education system, who are of the official school-entrance age, expressed as a percentage of the population of the same age.

The calculation requires new entrants in the first grade of education cycle which are the official school-entrance age and population at the official school-entrance age. The method of calculation is as follows:

$$(NIR) = \frac{\text{New entrants in the first grade of education cycle who are of the official school-entrance age}}{\text{Population at the official school-entrance age}} \times 100$$

A high Net Intake Rate for primary education of official primary school-entrance age children indicates a high degree of access to the first grade of primary education, Chart 2.1.1.2.1, indicates the trend of past five years NIR at regional level. As shown, NIR of Grade 1 at 2001 E.C was 69% and then this rate climbed to 91.0% by 2005 E.C with AAGR of 7.17%.

28	Shoa West	49.54	50.01	49.76	52.01	52.48	52.26	66.36	63.42	64.9	0.96	0.95	2.9	2.5
29	Wellega East	67.38	68.91	68.1	72.58	70.93	71.76	91.4	84.35	87.9	0.92	0.95	7.0	3.7
30	Wellega West	74.11	74.56	74.33	83.36	81.74	82.54	96.46	92.08	94.29	0.95	0.90	4.4	8.2
	Total Oromia	62.53	64.35	63.38	61.23	61.21	61.22	94.15	87.78	91.01	0.93	1.04	6.37	-2.16

As shown from table 2.1.1.2.1 NIR of the regional average is 91.01%. As indicated, among all zones and Administrative towns of the region, 13 of them are having NIR greater than the regional average. Unfortunately, six of them are having more than 100%, which is out of logical assumption of NIR. This may happened due to many reasons, among these assumptions; wrong pupils' age registration during data collection at the school level, errors of CSA data capturing and migration are the major suspected reasons. On the contrary, there are also zones and administrative towns which are having low NIR as compared to the regional average.

Concerning to GPI, among all zones and administrative town of the region 21 of them were having greater than or equal to regional average of GPI 0.93, amongst nine of them are having GPI more than (1.0), which is the level of the standard for equity of gender.

2.1.2. Early and late Starters

2.1.2.1. Early Starters

Students said to be early starters if their actual enrolment age is less than that of official school admission age/7 years old/. If all children of official school admission age/7 years old/ of a specific area at a given year have join school, the AIR of that area will be 100%. But due to the inclusion of under-aged and over-aged children, AIR can be over 100%. Therefore, timely entrance into the education system is important to minimize such gaps. As we can see from chart 2.1.2.1.1 below, the percentages of early starters have been dropped from year to year, for example it has been 3.6% in 2001 E.C (2007/08) and continuously by declining from year to year, it is dropped to 0.8% by 2005 E.C. From this progress, we can imagine that, timely entrance of children into education system is getting improved in the last five years by AAGR of 35% at regional level. Additionally, Table 2.1.2.1.1 shows early starters at zonal and administrative town level.

Chart 2.1.2.1.1: Percentage of Early Starters for the Last Five Years (2001-2005 E.C)

2.1.2.2. Late Starters

Late Starters are new entrants to grade one whose age is greater than the official school admission age (7 years old). The indicator points out the proportion of children come to school for the first time after their official school admission age of the level. It is expected that the percentage of the new entrants to grade one whose age is greater than the official school admission age (7 years old) has to decrease from year to year till it reaches 0%. However in the last five years the percentage of late starters has fluctuated up and down from year to year, this shows that the number of over age children admitted to school is not plummeted continuously.

Chart 2.1.2.2.1 shows the regional late starters' percentage of last five years. As indicated, the percentage went down gradually from year to year. for example it is 67.4% in 2001 E.C (2007/08) then it is dropped to 36.1% in 2005 E.C (2011/12) with AAGR of 13.3%. Even though the figure shows progress in minimizing late starters of those join the school lately; the data indicates still 36.1% of students enrolled to grade one were over aged at regional level. As we can see from table 2.1.2.2.1, among all Zones and Administrative towns of the region 7 zones and 10 administrative towns are above regional average of late starters 36.1%, whereas, the rest are below the regional average.

2.1.2.3. Percentage of Not Admitted

It is the proportion of 7 years old, in other words, it is the percentage of children who did not admit the school at their official age of schooling. It can be derived simply from the NIR in such a way that (100-NIR) for both boys and girls.

In 2004 E.C (2011/2012 G.C) the percentage of children who did not join the school at the right age was 12.3% (9.4% of boys and 15.3% of girls). However as shown from the table 2.1.2.3.1 by 2005 E.C /2012/13 G.C/ the percentage of children which is not-admitted to the school has been decreased to 9.0% (5.8% of boys and 12.2% of girls). Nevertheless, the data shows progress to attain the goal; there are still exist about 9% of children which is not admitted to the school at the right age, in the system. So that it's our responsibility bringing those children to the schools.

2.1.3. Gross Enrolment Rate (GER)

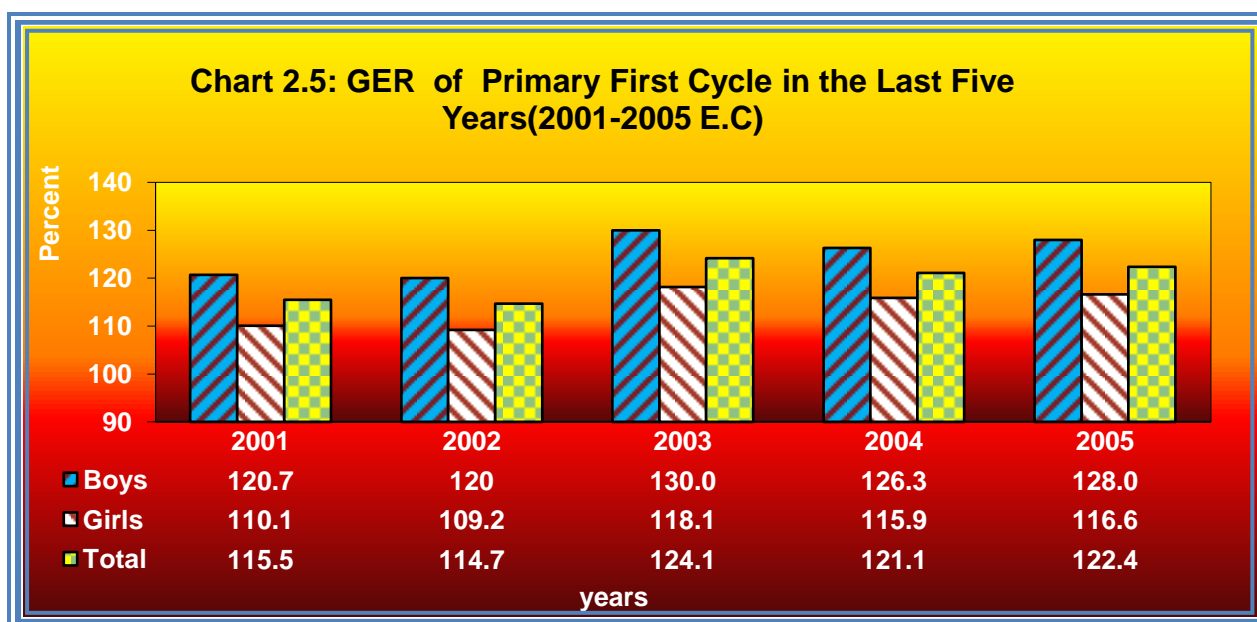

Gross Enrolment Rate is, defined as the total enrolment in a specific level of education, regardless of age expressed as a percentage of the official school-age population corresponding to the same level of education in a given school year. GER is a crude measure of education coverage. Since it includes under-aged and over-aged pupils, GER can be greater than 100%, and frequently in countries to attempt in addressing the backlog of students attending the school because of different reasons, such as financial need, family issues, or lack of schools.

The data required to calculate GER is, total enrolment in a specific level of education, regardless of age and official school-age population corresponding to the same level of education. The method of calculation is as follows

$$(GER) = \frac{\text{Total enrolment in a specific level of education, regardless of age}}{\text{official school - age population corresponding to the same level of education}} \times 100$$

2.1.3.1. Gross Enrolment Rate of First Cycle Primary /1-4/

Gross Enrolment Rate of first cycle primary is the rate calculated simply by dividing the total number of students enrolled in first cycle primary (irrespective of their age) to the total population of 7-10 years old. As chart 2.1.3.1.1 shows, by 2001 E.C (2007/08) GER of the region is 115.5% and then the data ascended to 122.4% by 2005 E.C. As shown from the data the number of over age and under age children in the school system has not still decreased.

As shown from table 2.6, in 2004 E.C, from GER of first cycle primary, three zones and six administrative towns are below the regional average (122.4%), while the rest are above the regional average.

Concerning to GPI, 12 zones and Administrative Town of Oromia have greater than regional GPI of 0.91; amongst 10 of them are having GPI of one or greater than one. Related to the 'RUPI' (Rural/ Urban Parity Index), seven zones are having PI (Parity Index) greater than the regional average (0.79).

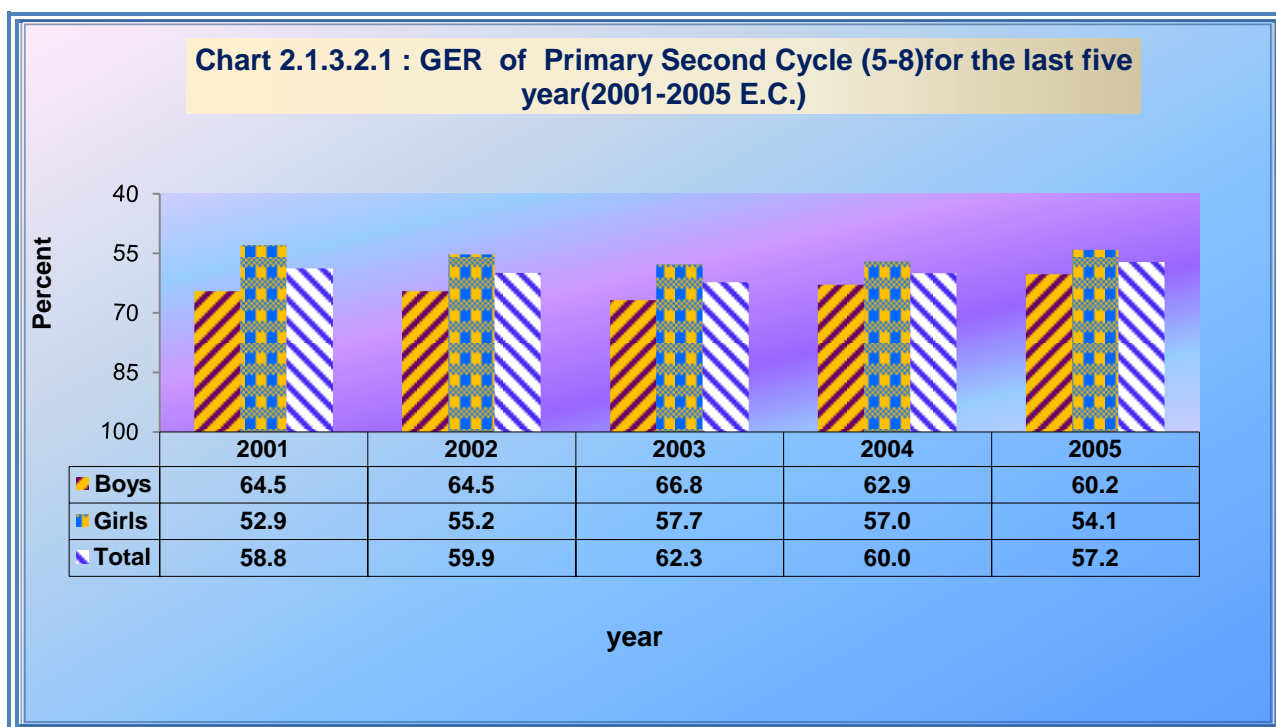

The other method in analyzing gender issue is comparing the gender gap of the level. Accordingly gender gap is expected to be zero, which indicates whether both are joined the school equally or not. Negative on the gender gap indicates that, rate of female participation is greater than that of male. So that, as data shows, among all zones only seven of them are having greater than the regional gender gap average 11.7%, the rest are less than the regional average, among them one zone and eight administrative towns are zero and less than zero (negative) in their gender gap.

2.1.3.2. Gross Enrolment Rate of Primary Second Cycle /5-8/

Gross Enrolment Rate of second cycle primary (5-8) is the rate calculated simply by dividing the total number of students enrolled in second cycle primary (irrespective of their age) to the total population of 11-14 years old. As shown on Chart 2.1.3.2.1, the Gross Enrolment Rate of primary second cycle (5-8) shows fluctuation during the last five years. It was 58.8%, in the year 2001 E.C. after fluctuating up and down finally it was dropped to less than the initial rate.

As Table 2.1.3.2.1 below indicates, the second cycle primary GER of 11 zones and 12 administrative towns exceed the regional average of (57.2%). Whereas, amongst seven zones are registered less than the regional average GER.

Regarding to GPI, 11 zones and all the nine administrative towns in the region have GPI greater than that of the region (0.90), amongst three zones and four Administrative towns are having GPI more than (1.0).

**Table 2.1.3.2.1: Gross Enrolment Ratio and Equity Indicators of (5-8), According to Their GER
2005 (2012/13)**

2.1.3.3. Gross Enrolment Rate /GER/ Primary (1-8)

Gross Enrollment Rate of primary education (1-8) is a crude measure of primary educational coverage, which indicates the percentage of total enrollment in primary schools irrespective of age out of the corresponding primary school age (7-14) population.

Apparently, it includes under-aged and overage pupils, GER can be higher than 100%. The trend of GER for primary education of the region over the past five years period tells us that, it has been fluctuating up and down. Accordingly, GER of the region was 89.3 % in 2001 E.C (2007/08) and then by 2005 (2012/2013) in showing a steady increment reached 92.1%. As the data shows, even though fluctuation was frequent in the middle of past five years. Even though there is a lot of expectation for the reason of fluctuation, it is difficult to list those reason here, however it is better to go through making basic research on the issue.

As table 2.1.3.1.1 illustrates, ten zones and one administrative town in the region are having GER below the regional average (92.1%) in the year 2004 E.C (2011/12). But, the rest zones and administrative town are below the regional average. Regarding to GPI, 12 zones and 11 administrative towns are registered GPI greater than the regional average 0.9. Amongst eight towns and one zone have GPI greater than or equal to 1.0, which means participation of girls are more than that of boys in those area. Finally, regarding to the regional disparity, (Urban and Rural), among 18 zones of Oromia only six of them are having RUPI greater than or equal to the regional average (0.65).

Pastoralist Woredas Average		112.8	91.3	102.3	125.2	99.7	112.8	36.3	24.3	30.5	78.0	60.8	69.7	84.8	65.4	75.4	0.8	19.4

As shown on table 2.1.3.3.2, the pastoralist woreda GER shows that, 21 woredas were having greater than the Wored pastoralist Woredas' average GER (**75.4%**). Regarding to GPI, 19 pastoralist woredas had GPI greater than pastoralist Woredas' average 0.77. among them seven pastoralist woredas are greater than 1.00.

2.1.4. Net Enrolment Ratio (NER)

It is the rate of the official age group for a given level of education expressed as a percentage of the corresponding school age population. NER is the best way of measuring organized timely school participation and is a more refined indicator of school and enrolment coverage in terms of explaining the proportion of pupils enrolled from the official age group. NER is usually lower than the GER since it excludes over-aged and under-aged pupils. NER is calculated by dividing the number of properly aged primary students (for Ethiopia ages 7-14) by the number of children of school age (7-14) population.

$$NER = \frac{\text{Total Enrolment in a specific level of Education with official age - group}}{\text{Official school age population corresponding to the some level of Education}} \times 100$$

A high NER denotes a high degree of participation of the official school-age population. The theoretical maximum value of NER is 100%. Increasing trends can be considered as reflecting improvement in participation of official school age population at the specified level of education. When NER compared with GER, the difference between the two ratios highlights the incidence of under-aged and over-aged enrolment. If the NER is below 100% then the difference with 100% provides a measure of the proportion of children not enrolled at the specified level of education. However, some of these children could be enrolled at other levels of education.

2.1.4.1. NER in first cycle Primary (1-4)

It is the percentage of students who enrolled in first cycle primary, whose age is 7-10, compared to the school age population of this level; that is total population of 7-10 years old. Chart 2.1.4.1.1 below shows the trend of last five years NER at regional level. Accordingly, the NER of primary in first cycle was 80.7% in 2001 E.C and then inclined to 95.8% by 2005 E.C with AAGR of 3.5%.

Chart: 2.1.4.1.1: NER of First Cycle Primary (1-4) for the Last Five Years (2001-2005 E.C)

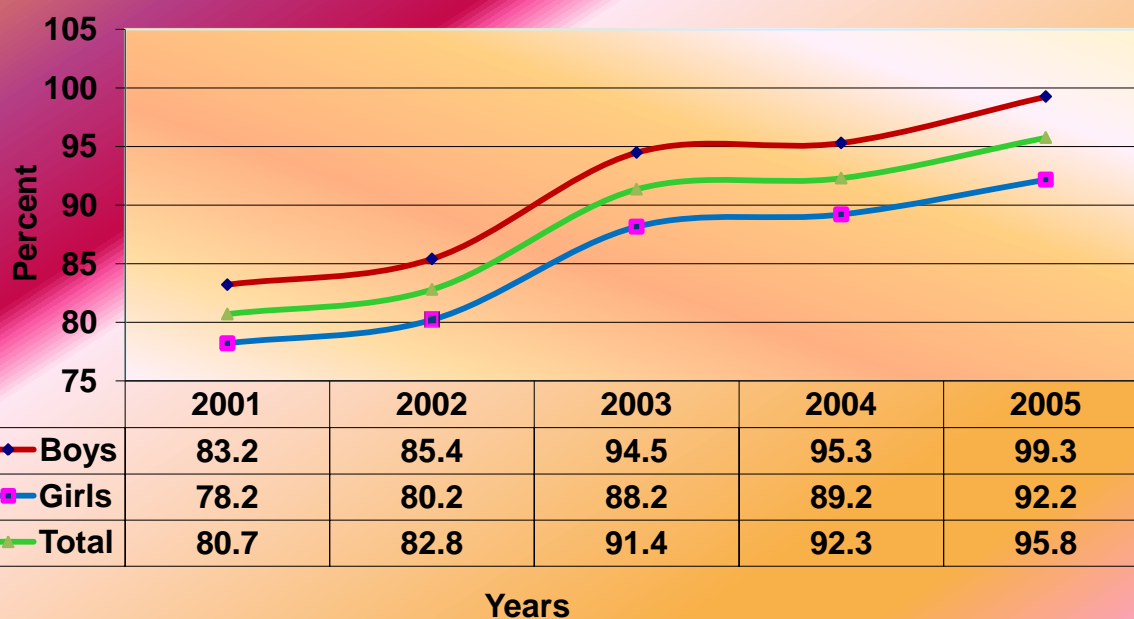

Table .2.1.4.1.1 also demonstrates that, eight zones and three administrative towns are having greater than the regional average NER of first cycle primary (95.8%). Unfortunately, nine of them are registered greater than 100% NER. However, logically NER could never be more than 100%. There are different assumptions for such kinds of inaccuracy. Among the major assumption, some students might be migrated to those zones from other areas for attending their schooling, where as those students might not be included in the SAP of the zones or administrative towns. Secondly; wrong registration of Pupils age during recording of registration process, and finally the CSA census capturing problems on those areas, are the major suspected assumptions for the problem.

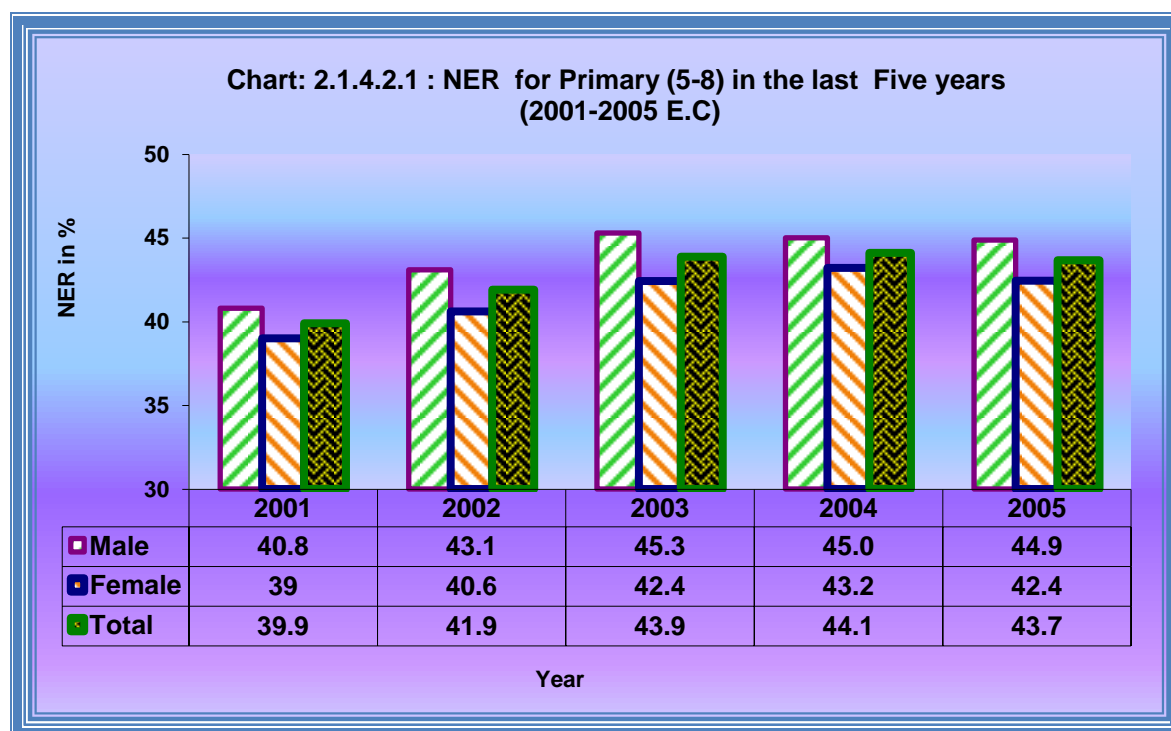

Regarding to gender disparity, only six zones are having less than the regional average GPI (0.93). The rest are greater or equal to the regional average, among them nine administrative towns and two zones are registered GPI greater than or equal to one.

2.1.4.2. NER in the Second cycle Primary (5-8)

NER at primary second cycle is the proportion of enrolment of students in second cycle primary of the age (11-14), with eligible school population of age (11-14). As can be seen from Table 2.1.4.2.1 below; eleven zones and ten administrative towns have registered above the regional average NER of second cycle primary (43.7%), whereas seven zones and two administrative towns are having less than the regional average. Out of all zones and Administrative towns in the region 12 zones and ten Administrative towns exceeds the regional GPI (0.95). Concerning Rural/Urban parity Index/, among 18 zones of Oromia, only five of them have RUPI greater than the region average (0.46).

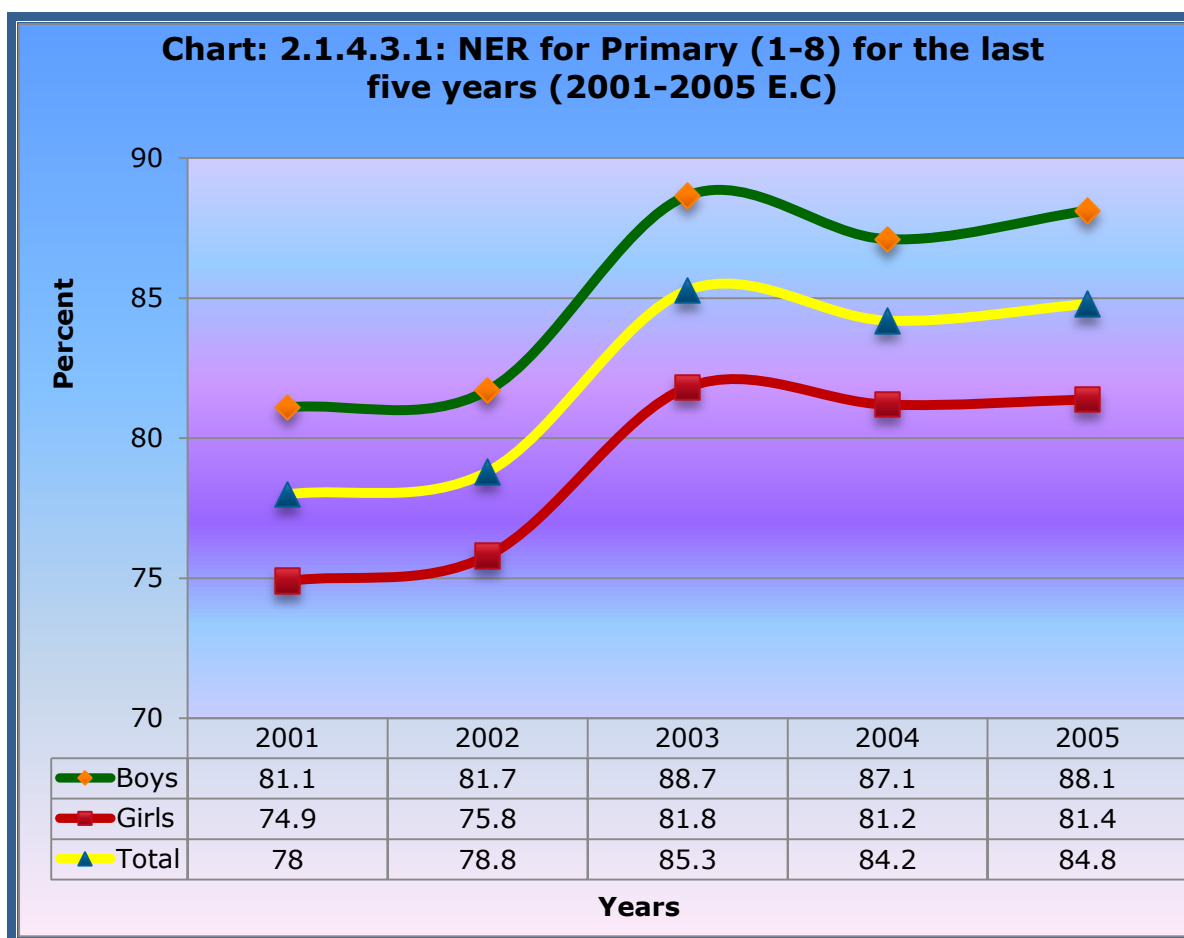

As chart 2.9 above indicates, the trend of the NER of primary second cycle school in the region has shown, the significant progress over five years period. Accordingly, in 2001 E.C it was 39.9% and then by showing a bit increment it went up to 41.9% by 2005 E.C, with the average annual growth rate of 0.98%. As the growth rate indicates, NER of the level shows steady increase, so that, as educational practitioners we have to give serious attention to fill the gap.

2.1.4.3. Net Enrolment Rate in Complete Primary (1-8)

The Net Enrolment Rate (NER) for complete primary can also be calculated in a similar way of calculating NER for first cycle and second cycle primary. It is the proportion of the appropriate school age (7-14) children enrolled in primary school with the total school age (7-14) population. When the first and second cycle NER separately compared with complete primary in the region, it would take more time to achieve 100%. This is because those children in first cycle primary of age 11-14 who are over aged for first cycle, and students of age 7-10 who are under aged for the second cycle are included while calculating NER for complete primary. As illustrated on the chart 2.1.4.3.1; in between the years (2001 E.C to 2005 E.C), NER of complete primary school shows steady increment from 78% in 2001 E.C to 84.8% in 2005 E.C. with annual average growth rate of 1.7%, which means the increment was almost steady in the past five years, so that, the issue needs our attention to keep the progress.

As illustrated from Table 2.1.4.3.1 among all zones of the region, NER of seven zones' and six Administrative town exceeds the regional average of primary education (82.8%). whereas, 11 zones and the rest administrative towns have below. Additionally, among all of zones and Administrative town only five zones are registered below the regional average GPI (0.92). The remaining is above the regional average; amongst 10 zones and administrative towns are registered GPI 1.00 and greater than 1.00. Regarding to RUPI, from all zones of the region, only five zones are having PI greater than the regional RUPI which is 0.71.

2.1.5. Enrollment of Children With Special Needs

Table 2.1.5.1 illustrate that, the total enrolment with Special Needs are **25,468** (*Male 15007, Female 10461*) in 2005 E.C (2012/13 G.C) at regional level. This data indicates that, there are a lot of children with Special Needs who are currently not attending schools throughout the region as comparing to 10% of school age population of their level. Therefore, the issue needs our attention to bring those children to the school, in order to make them getting opportunities to learn in an inclusive environment. So that, the issue needs attention from government side, by providing teachers training, physical infrastructure and the provision of learning equipment's, and additionally it needs full participation of society as well.

Table 2.1.5.1 demonstrates the involvement of the special need in primary education of our region. The table illustrates the information of the inclusive education program by their type of disability, by zone and by cycle taught. Among the data listed on the table the number of students with type of disability are the following (seeing impaired, Hand capes, hearing impaired, mentally impaired and other) are 3217, 7633, 6419, 5179, 3020) respectively.

2.1.8. Primary Gender Equity in the Last Five Year

As noted on table 2.1.8.1, the primary gender equity of the last five years have been fluctuated up and down accordingly, gender gap of primary (1-8) GER has declined gradually from 17.7% in 2000 E.C (2006/07) to 10.6% in 2003 (2010/11) and then to 8.4% in 2004 (2011/12). Additionally, as can be seen from table 2.1.8.2, gender gap of primary (1-8) NER has dropped from 10.0% in 2000 (2006/07) to 5.9% in 2004 (2011/12).

Table 2.1.8.1: Primary Gender Gap by GER for the Last Five Years									
Year	GER Primary (1-4)			GER Primary (5-8)			GER Primary (1-8)		
	Male	Female	Gender Gap	Male	Female	Gender Gap	Male	Female	Gender Gap
2001	100.8	92.9	7.9	67.4	57.1	10.3	84.8	76.3	8.5

2.2. Quality

Quality of education is the key indicator to detect whether a given country is on the right track to achieve its education system. Quality of education system may refer to many different characteristics, such as quality of inputs into education system, quality of educational outputs, process and outcomes. Here in this publication we focus on quality, in relation to educational inputs such as, teacher's quality, and different ratios in our education system. Some indicators of quality depend on the total number of student enrolment.

2.2.1. Qualification of Teachers in Primary Education

One of the main factors, which affect the quality of education, is the qualifications of the teacher. That is, whether the educational qualifications of the teacher meet the requirements of the level he/she is teaching. According to national standards, primary education requires teachers with minimum qualification of Diploma from College of Teachers Education.

Percentage of Qualified Primary School Teachers

As illustrated from table 2.2.1.1 percentage of qualified primary/1-8/ teachers in 2004 E.C, have been 59.6% (Male =56.4% Female =59.6%) at regional level. Teacher's qualification for first and second cycle primary is also indicated on the table. As indicated, percentage of qualified teachers for first cycle primary at regional level are 39.2% (Male=31.5% & Female=50.8%), whereas for the second cycle primary the percentage is 88.9% (Male=86.5% & Female=94.9%). From the data shown one can understand that percentage of qualified teachers for first cycle primary/1-4/ are very low. So that policy makers, planners and concerned bodies have to, give due attention for the issues.

2.2.3. Pupil - Teacher Ratio (PTR)

This is one of the most common indicators of quality education used in educational planning. It is believed that a lower number of pupils per teacher indicate that pupils will have better chance of contact with their teachers. The standard set for pupil teacher ratio for primary education is 50:1. However, as shown on chart 2.2.1, during the last five years the PTR of primary education is highly fluctuated by increasing and decreasing from year to year. However, in the last two consecutive years improvement have been seen in PTR. Accordingly, it was 59:1 in 2003 E.C. then by 2005 the PTR have reached 56:1. The ratio indicates that as the rate at which number of teachers raised it shows that, enrolment of students increased. Therefore, even though the performance was satisfactory for the time being, we expect to have more effort to train additional teachers to bring this ratio back down to the standard 50:1.

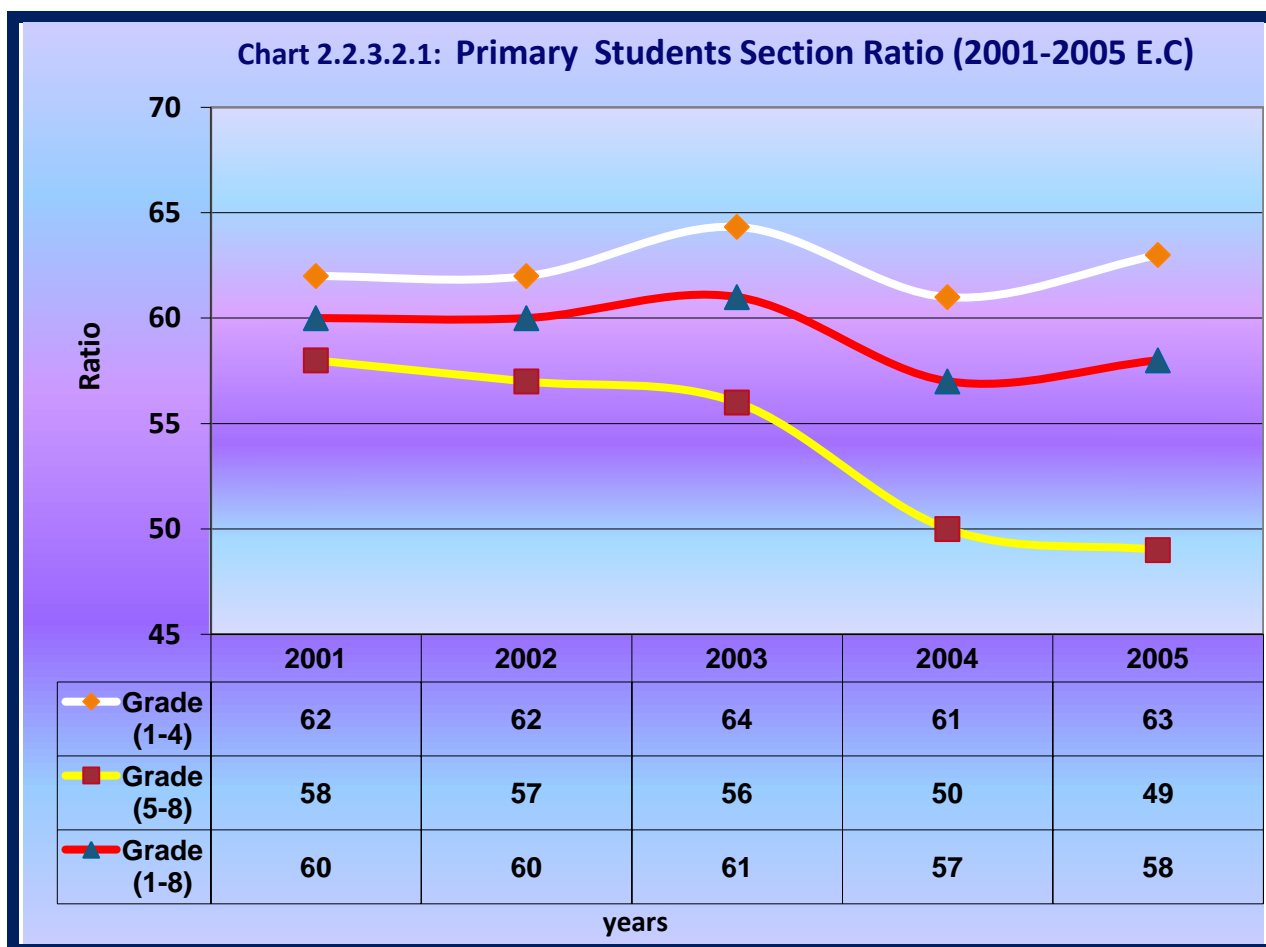

Furthermore, calculating pupils to teacher ratio by cycle also presents a more realistic view of pointing out the problems and gaps of the issue. In this regard, PTR at first cycle primary (1-4) registered 67:1 in 2004 E.C; so, the value remains the same in 2005 E.C.as previous year, while in the second cycle primary (5-8) it shows improvement to 41:1 from 43:1 of last year. Whereas, the same improvement was registered at primary education program to 56:1 of ratio from 57:1 ratio comparing to the last year.

As shown on table.2.2.3.1.1 below Jimma, East and West Hararge zones have PTR of 79:1, 76:1 and 75:1 which is quite far from the standard. Therefore, due attention from the concerned body is mandatory for the issue.

2.2.3.2. Pupil -Section Ratio (PSR)

It is one of the educational quality indicators that indicate average number of pupils per class. It gives a rough estimation of class size, assesses the efficiency of resource utilization and it also used to assess the teaching- learning process. The national standard of PSR is 50:1 for primary education. As one can see from chart 2.2.3.2.1 in the last five years, PSR in primary school has improved from 60:1 in 2001 E.C to 58:1 in 2005 E.C. additionally, PSR of 2004 E.C at regional and zonal level were illustrated on table 2.2.3.2.1.

As table 2.2.4.1 shows, among the primary schools of the region 50%, 67.3%, 18.0%, 33.4% of them have Library, Pedagogical Centre, Electric Power and water service respectively. Additionally, regardless of the quality standard all primary schools in the region reported that as they have latrines.

2.2.5. Finance of Primary Schools

Education in our country was financed through two step process. The first, involves fiscal transfers from the federal government to the regions and the second, from regional governments to *woredas*. Most transfers operate through large federal block grants which our region and *woredas* Finance and Economic Development Sectors may allocate freely. A ‘three parameter’ formula for grant allocation to the regions takes into account population size, poverty status and development levels. Our Regional Government also uses these three-parameter formulas to allocate the grant to *woredas*.

Tables 2.2.5.1 and 2.2.5.2 demonstrates the financial information of the year, which was collected from the annual school census questionnaire. The tables indicate revenue of the region by zonal level. The data specify all about the information of primary education program of government and non-government school’s revenues.

2.3. EFFICIENCY

Education system is said to be efficient if maximum output is obtained from a given input or if a given output is obtained with minimum possible input. The problems of measuring efficiency in education, however, are considerable. There are several indicators used to measure the efficiency of the education system.

2.3.1. Indicators of Internal efficiency with Different Profiling Methods

The Internal Efficiency Rate (IER) is the ratio of number of student's years that should be, ideally spent to carry out a certain number of students at the end of primary cycle out of the number of students-years effectively spent.

$$\text{IER} = \frac{\text{Student's years that should be ideally spent}}{\text{Number of student's years effectively spent}}$$

Internal Efficiency Rate (IER) is calculated with different methods such as Transverse, Longitudinal and Pseudo-Longitudinal Methods,

I. Methods of Calculating IER by Transverse Method

$$\text{IER} = \frac{(\text{Survival Rate (Transverse Method) for the final grade}) * (\text{Duration (in years) of the education level})}{\text{SUM of Survival Rates (Survivors) From the first to the final grade of the same education level}}$$

$$\text{IER} = \frac{\text{SR}_{G8} * 8}{\text{SR}_{G1} + \text{SR}_{G2} + \text{SR}_{G3} + \text{SR}_{G4} + \text{SR}_{G5} + \text{SR}_{G6} + \text{SR}_{G7} + \text{SR}_{G8}}$$

SR_{G1}: Survival Rate for Grade1,

SR_{G8} = Survival Rate for Grade8

II. Methods of Calculating IER by Longitudinal Method

$$\text{IER} = \frac{(\text{Survival Rate (Longitudinal Method) for the final grade}) * (\text{Duration (in years) of the education level})}{\text{SUM of Survival Rates (Survivors) From the first to the final grade of the same education level}}$$

III. Methods of Calculating IER by Pseudo-Longitudinal Method

$$IER = \frac{(\text{Survival Rate (Pseudo-Longitudinal Method) for the final grade}) * (\text{Duration (in years) of the education level})}{\text{SUM of Survival Rates (Survivors) From the first to the final grade of the same education level}}$$

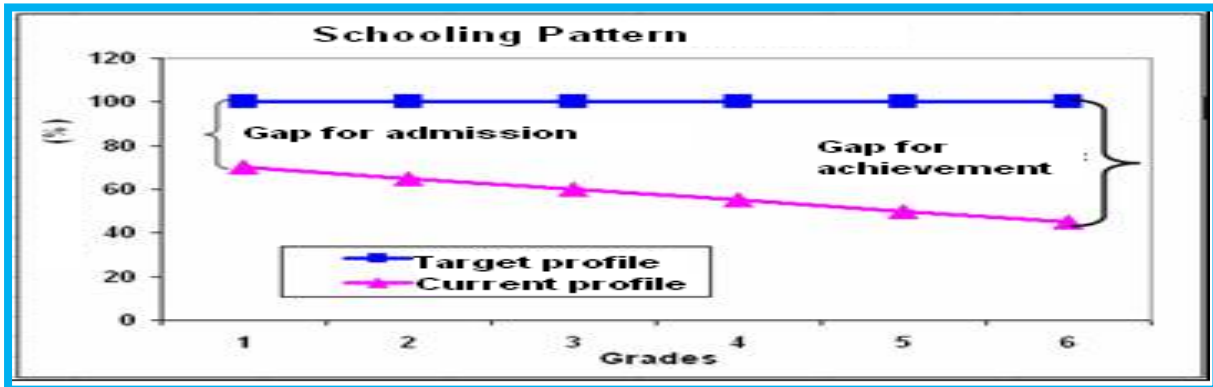

Table 2.3.1.1: Internal Efficiency Rate (IER) with Different Method. 2005 E.C (2012/13)									
Internal Efficiency Rate (IER) with Transverse Method

Efficient Students-years	254								
Effective Students-years	495								
IER	0.51								

2.3.2. Interpretation of the Internal Efficiency Rate

Internal Efficiency Rate is a number between 0 and 1. The more this ratio is close to 1, the more the system is efficient. It is complementary to 1 (1-IER) is interpreted as the percentage of resources wasted, because these resources have been used to finance dropouts and repeaters.

2.3.2.1. Schooling Profile /Enrolment Pattern/

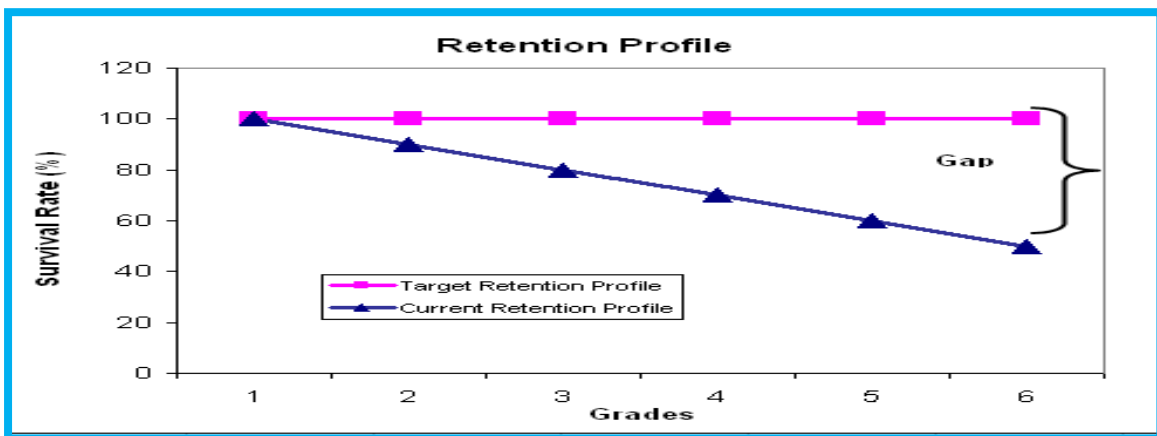

The schooling profile is, constituted of Age-Specific Enrolment Ratio for a given cycle of education system.

The schooling pattern interpreted us the student flow through the education cycle. Its trend determines the efficiency of the system to keep students in the system until they complete their schooling

2.3.2.2.Retention Profile

The retention profile is, constituted by the series of survival rate at each grade level. It measures the capacity of the system to keep students in the system until they complete their schooling. Data required to determine retention profile are Enrolment and News entrants by grade at least for two years

2.3.2.3.Survival Rate (SR)

A survival rate approaching 100% indicates a high level of retention and low incidence of dropout. Survival rates may vary from grade to grade, giving an indication of grades with relatively more or less dropouts. The distinction between survival rates with and without repetition is necessary to compare the extent of wastage due to dropout and repetition.

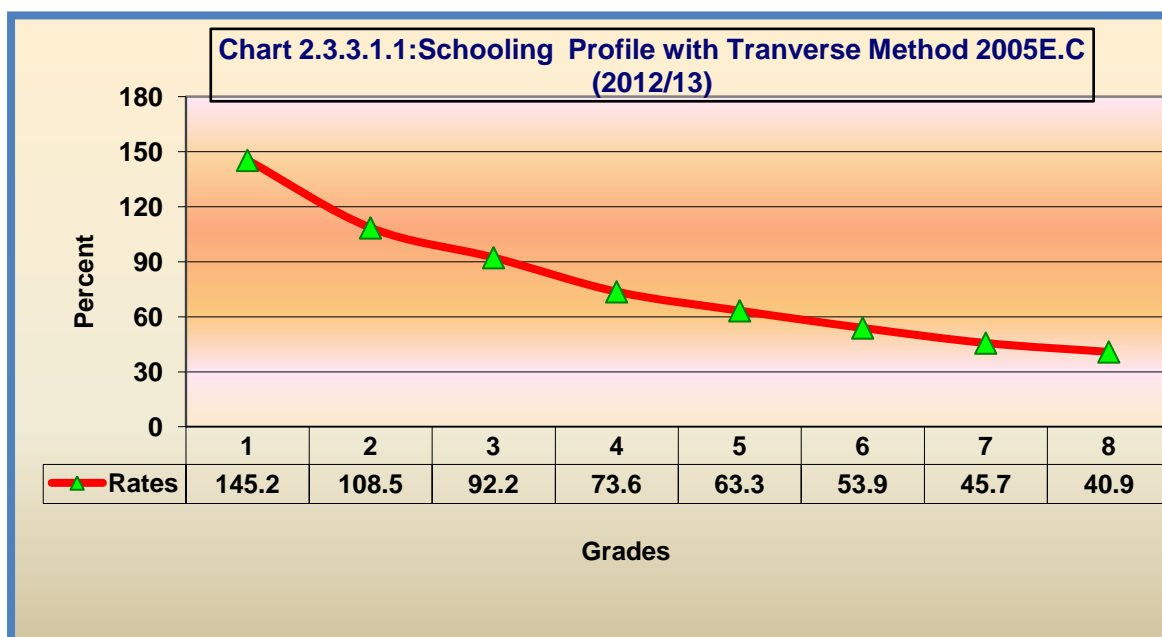

2.3.3. Different Types of Schooling Profiles and Retention Profiles:

There are different types of schooling profiles, which determine Age-Specific Enrolment Ratio for a given cycle of education system namely; Transverse, Longitudinal method and Pseudo-longitudinal method.

2.3.3.1. Transverse method

Data required for Transverse method are, new entrants by grade and population at official age corresponding to each grade. Let a look, the 2005 E.C, schooling profile with this method

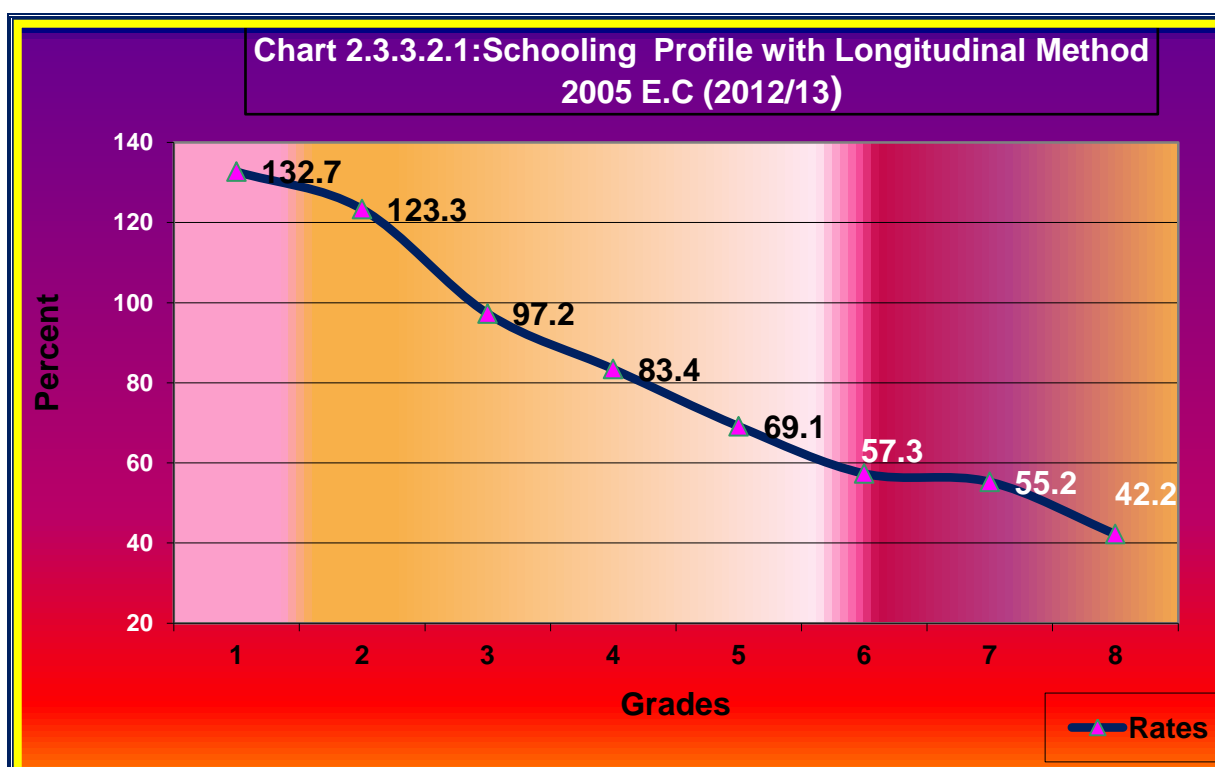

Table 2.3.3.1.1: Schooling profile with Transverse Method 2005 E.C (2012/13)								
Year 2005 E.C	G1	G2	G3	G4	G5	G6	G7	G8
Enrolment	1607846	1141496	929359	730970	608336	488372	415996	339073
repeaters	160553	95798	69514	66570	57101	36216	44052	19999

Schooling profile,	145.2%	108.5%	92.2%	73.6%	63.3%	53.9%	45.7%	40.9%
(Rention Rate/Survival Rate)	100.0	72.2%	59.3%	45.7%	37.9%	31.1%	25.5%	22.0%

2.3.3.2. Longitudinal Method

Data required for Longitudinal Method are, new entrants by grade for consecutive years of the total duration of education level. For instance, in Ethiopia, we need data for 8 consecutive years and population at the official school entrance age, 8 years ago to implement this method.

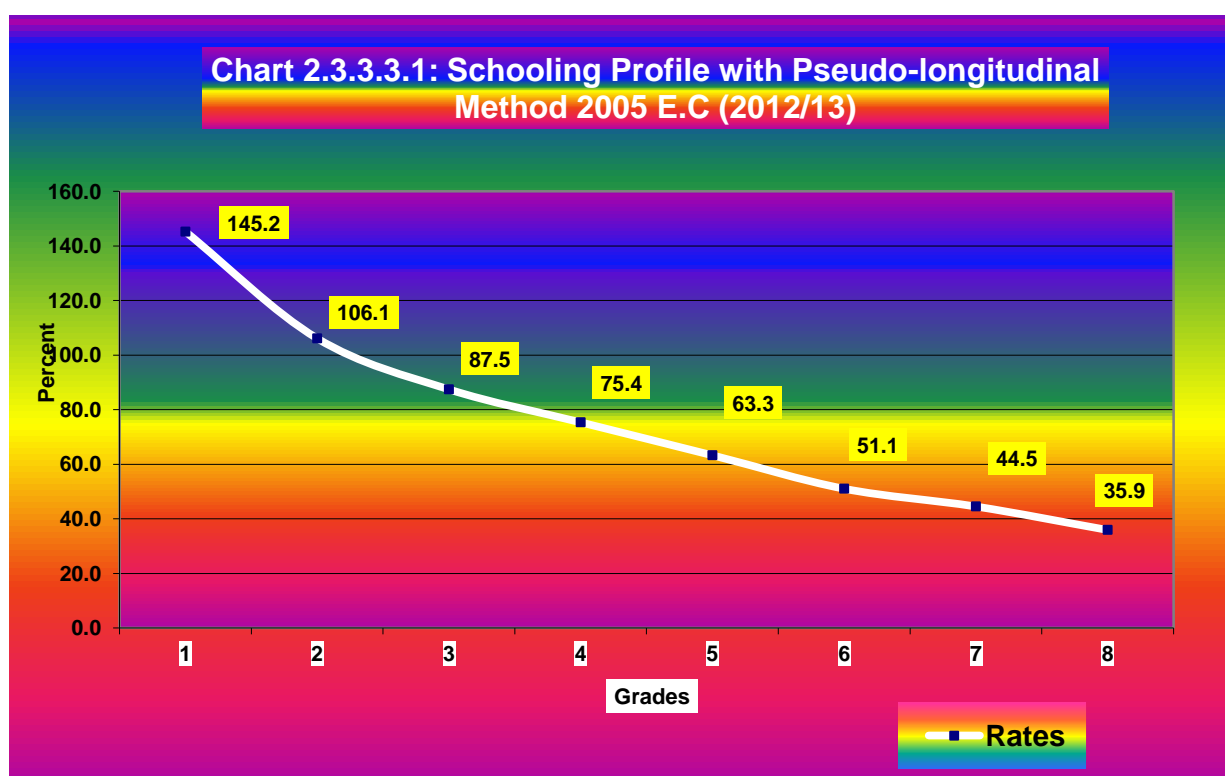

Population with 7 years old in 1998	800,000							
New Entrants by Grade and Year	G1	G2	G3	G4	G5	G6	G7	G8

2.3.3.4. Both Schooling Profiles with Chart

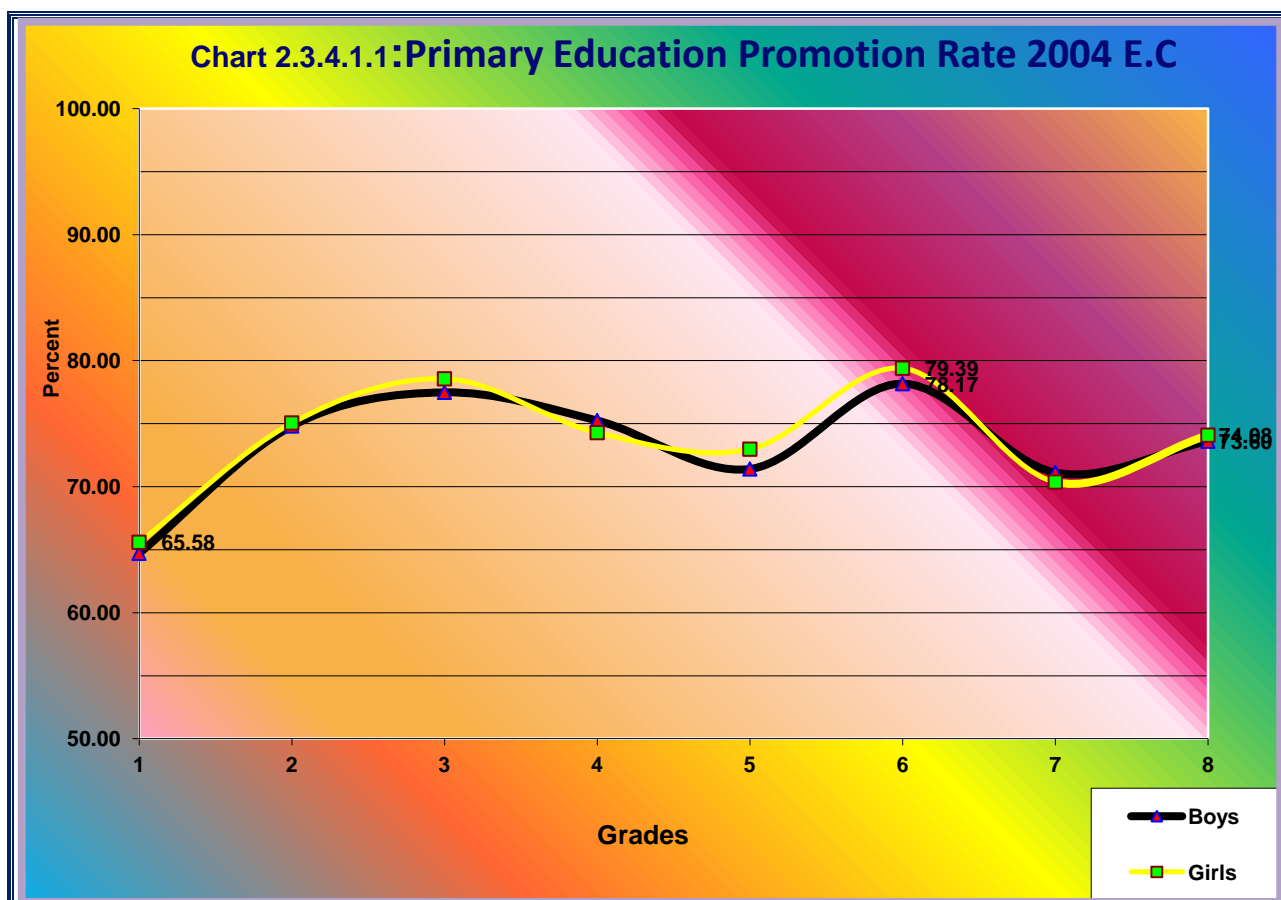

2.3.4. Internal Efficiency and Flow Rate

Promotion, Repetition and Dropout rates are the three paths of student flow from grade to grade and characterize the efficiency of the education system in generating graduates. These rates are used for evaluating, monitoring and projecting the efficiency of students flow in our education systems. In this publication the primary education system of Oromia can be evaluated in terms of internal efficiency indicators.

2.3.4.1. Promotion Rate (PR)

Promotion Rate is the proportion of pupils enrolled in a given grade that reach the next grade in the following year. The data required in this calculation is new entrants in grade j for year T and enrolment in grade $j-1$ for year $T-1$. It is also interpreted as a high level of promotion rate indicates a high level of retention or survival rate.

$$PR = \frac{\text{New entrants in grade } j \text{ for year } T}{\text{Enrolment in grade } j-1 \text{ for year } T-1} \times 100$$

2.3.4.2. Repetition Rate (RR)

Repetition Rate is the proportion of pupils enrolled in a given grade for a given year who studies in the same grade for the following year. Data required for this calculation is repeaters of grade **j**, in year **T** and enrolment of grade **j** of year **T-1**. It is interpreted as a high level of the repetition rate indicates a high level of repetition of grades. The problem of repeating has impact on the system because.

1. Repeating has wasted the resources they have used while they repeat in the same grade.
2. They occupied a school space that can be used by the other new comers. The formula to calculate Repetition Rate

$$RR = \frac{\text{Repeaters of grade } j, \text{ year } T}{\text{Enrolment of grade } j, \text{ year } T - 1} \times 100$$

Dropout Rate(%)				24.45%	16.66%	13.28%	16.69%	18.12%	13.56%	20.33%	21.38%	

2.3.4.3. Dropout Rates (DR)

Dropout Rate is proportion of pupils who withdraw from education system for more than one year. It corresponds to the difference between one and the sum of promotion rate and repetition rates. Data required for the calculation of dropout are, Promotion Rate and Repetition rate. High dropout rate constitute, interpreted as an obstacle in the achievement of UPE. Dropout problem has different impact on the system because

1. Dropouts have wasted the resources.
2. They occupied a school space, which could use the other new comers.
3. They have not acquired the minimal levels of literacy and numeracy.

The method to calculate dropout is the following;

$$\text{Drop-out Rate} = (100 - \text{promotion rate} - \text{repetition rate})$$

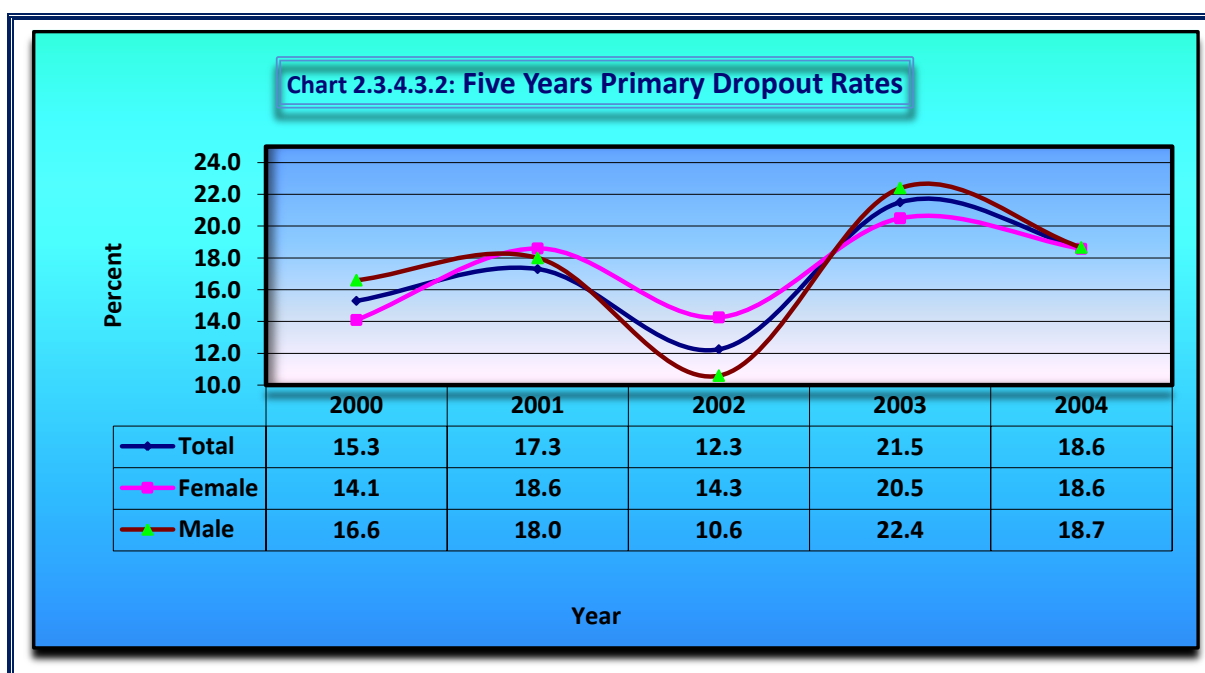

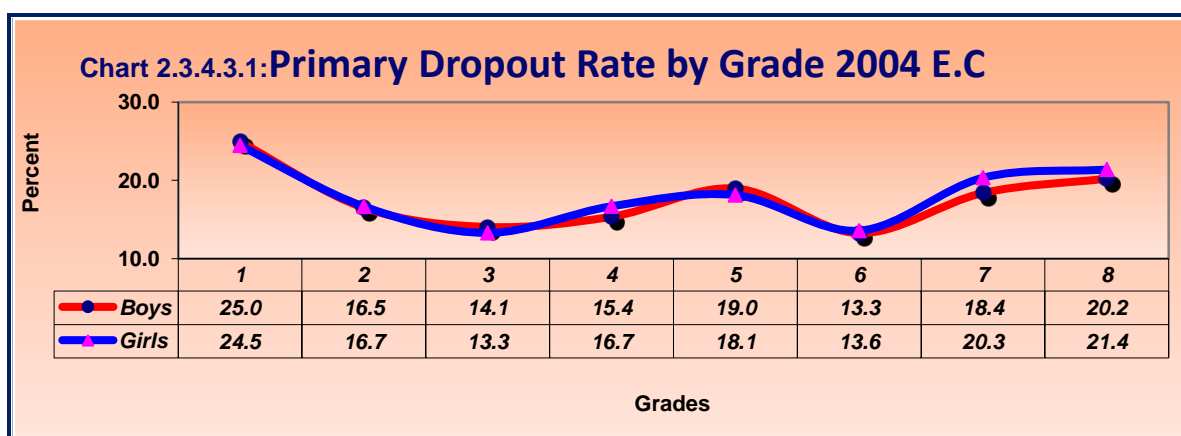

Chart 2.3.4.3.3: Five Years Grade 1 Dropout Rates

As chart 2.3.4.3.3 demonstrates, grade one dropout rate is 30.3% by 2001 E.C. But in following year the dropout rate at regional level has decreased to 22.0%. However by 2003 E.C the rate climbed up again to 28.1%. Therefore, the data shows as it needs considerable attention by the concerned bodies, to minimize the educational wastage happens because of dropout. From this data one can understand that grade one dropout rate has been fluctuating for the last three years.

Table 2.3.4.3.2: Summarized Internal Efficiency Indicators 2004 E.C (2011/12G.C)												
Rates	Grade 1			(1-4)			(5-8)			(1-8)

<i>Dropout Rates</i>	25.0%	24.5%	24.7%	19.0%	18.9%	18.9%	17.7%	18.2%	17.9%	18.6%	18.7%	18.6%

2.3.4.4. Transition Rate (TR)

Transition Rate is new entrants to the first grade of the end of primary second cycle (5th grade) or the beginning of secondary first cycle (9th grade) in a given year, expressed as a percentage of the number of pupils enrolled in the final grade of primary first cycle or primary second cycle education in the previous year respectively. Data required for calculating is new entrants in first grade of primary second cycle or first grade of secondary first cycle for a given Year **T**, and Total Enrolment in final grade of primary first cycle or primary second cycle for Year **(T-1)**. For example, if the increment of transition rate of primary students to secondary is raised, in the same way the proportion of pupils from primary education who reaches secondary education also elevated up. Method of calculation for **TR** is the following;

$$\text{TR to 5}^{\text{th}} = \frac{\text{New entrants in 5 th for Year T}}{\text{Enrolment of 4 th for Year T - 1}} \times 100$$

$$\text{TR to 9}^{\text{th}} = \frac{\text{New entrants in 9th for Year T}}{\text{Enrolment of 8th for Year T - 1}} \times 100$$

Chart 2.3.4.4.1: Transition Rate of Primary Education of Last Five years

2.3.4.5. Primary Completion Rate

Primary Completion Rate is highly dependent on the accuracy of the single age population for both points of measurement (for Grade 8, age 14 and for Grade 5 age 11) Table 2.3.4.5.1; shows the Completion Rates for both Grade 5th and Grade 8th. The Primary Completion Rate is internationally an established measure of the outcomes of an education system and calculated with the following method.

$$\text{Completion Rate} = \frac{\text{New entrant in last Grade}}{\text{Population official age in last grade}}$$

Where “New entrant in last Grade”= (total pupils in last Grade – repeaters in last Grade)

Table 2.3.4.5.1: Grade 5th Completion Rate by Zone 2004-2005 EC (2012-2013 G.C.)

2.4. COHORT ANALYSIS

Cohort analysis is based on the three basic flow rates namely repetition, promotion and dropout rates, we evaluate by it the effectiveness of our education system. There is a number of assumptions made to interpret the results of calculations of indicators of internal efficiency, in order to understand the limitations of the model. To perform cohort analysis it is imperative to have at hand indicators like survival rate by grade, indicators of the duration of the study, and indicator of the wastage. This cohort method allows us to predict future trends of the education system.

Assumptions behind cohort analysis

1. Only cohort of 1000 pupils is considered and no re-entrants admitted. Assuming that new entrants admitted at grade one, and no in-migration or out- migrations throughout the cohort years.
2. It also assumes that no pupil skips a grade, i.e., there is no double promotion.
3. The same flow rates apply to all pupils enrolled in a given grade, regardless of whether a pupil has reached that grade directly or only after a number of repetitions. This assumption is sometimes, referred to as the assumption of homogeneous behavior.
4. Pupils in a grade are, allowed to repeat only twice. This is in line with existing policy. However, in reality, a pupil may repeat a grade more than twice. In this case, the assumption remains constant and allows only for the repeating of the grade twice.

2.4.2. Internal Efficiency of the Cohort in Primary Education

I. Pupils Year By Grade Of The Cohort

Table 2.4.2.1: Pupils Year by Grade of Cohort Analysis								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	1114	788	642	545	450	348	300	225
Girls	1110	792	645	554	449	350	302	222
Total	1112	790	643	549	449	349	301	223

II. INDICATORS OF RETENTION BY GRADE OF THE COHORT

a. Survival Rate of the Cohort

The purpose of survival rate is to measure the holding power and internal efficiency of the education system. It illustrates the situation regarding retention of pupils from grade to grade in school, and conversely the magnitude of dropout by grade. Survival rate is the proportion of cohort pupils who reached the subsequent grade expressed as a percentage of pupils enrolled in the first grade of a given cycle in a given school year. It also used to measure the impact of repetition and dropout on internal efficiency. Survival by grade obtained by adding the number of pupils who eventually will promoted to the next higher grade. In each grade, some pupils promoted to the next grade without repeating a grade and others after repeating once or twice.

Table 2.4.2.2: Rates of Survival by Grade from the Cohort Analysis								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	72.09	58.93	49.71	41.04	32.39	27.22	21.30	16.55
Girls	72.77	59.44	50.68	41.16	32.95	27.76	21.28	16.42
Total	72.41	59.17	50.17	41.09	32.66	27.47	21.30	16.49

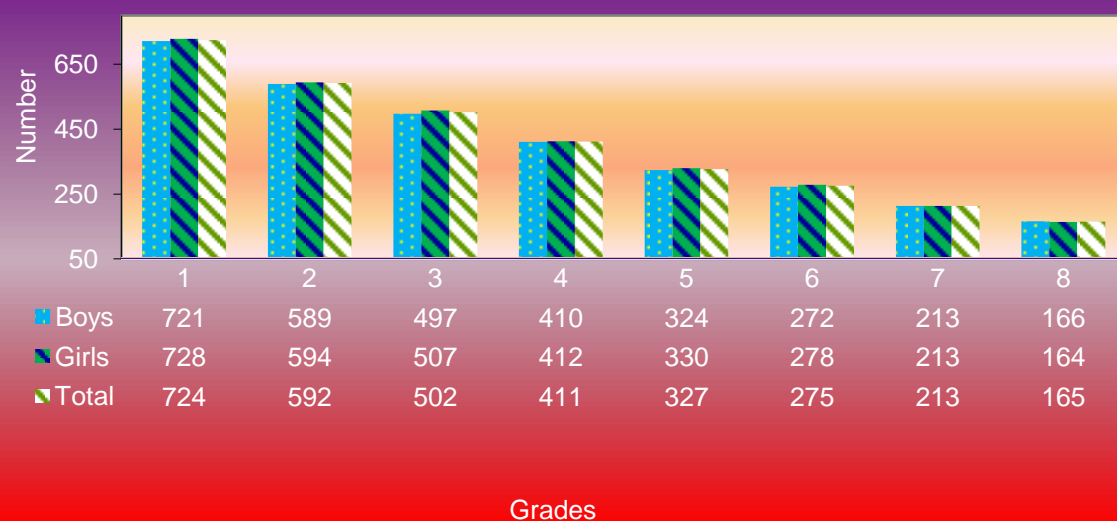

As the table 2.4.2.2, shows among 1000 students enrolled in grade 1, only 72.4% are survived in the cohort. The rest 27.6% left the school before completing grade 1. Only about 41.1% (Boys= 41.04% and Girls= 40.2 %) students survived to complete first cycle primary.

From the 1000 pupils started the cohort, only 16.5% (Boys=16.6%, Girls= 16.4 %) will finally survived at grade 8th. This constitutes 83.5% of students leave the system without completing primary education. So we can imagine how the issue needs serious attention from the concerned bodies and policy makers to fill this wide gap of educational wastage.

Table 2.4.2.3 :Number of Pupils Survived in Each Grade of the Cohort

Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	721	589	497	410	324	272	213	166
Girls	728	594	507	412	330	278	213	164
Total	724	592	502	411	327	275	213	165

Chart 2.4.2.1: Survival by Grade of the Cohort

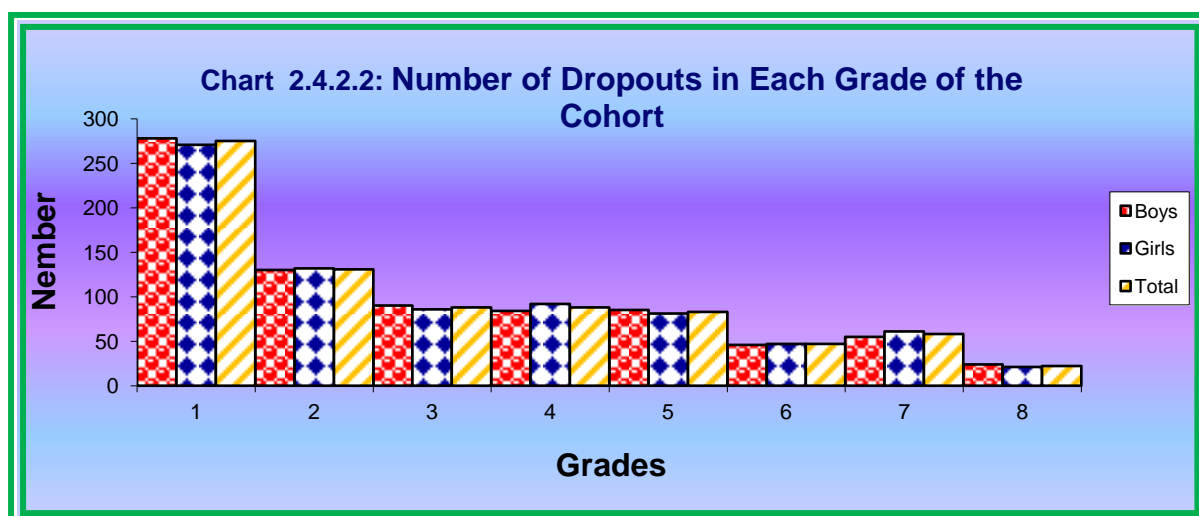

b. Dropout by Grade of the Cohort

Dropout is the proportion of students who leave the system at each grade. Dropout is the most serious problem in education system. The cohort data on the table 2.4.2.5 shows, among the cohort of 1000 pupil, 275 of them left the school before completing grade one.

Table 2.4.2.4: Percentage of Dropout by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	27.80	13.00	9.02	8.37	8.54	4.62	5.51	2.39
Girls	27.13	13.20	8.57	9.21	8.13	4.74	6.15	2.09
Total	27.48	13.10	8.81	8.78	8.34	4.68	5.81	2.25

Most of the students leave the system early in grade 1 and 2. About 27.5% of the cohort leaves the system before completing grade one. Majority of children leave the system at an early stage compared to dropouts at upper grades. This is an undesirable situation, to which planners and decision makers should pay immediate attention to the issue.

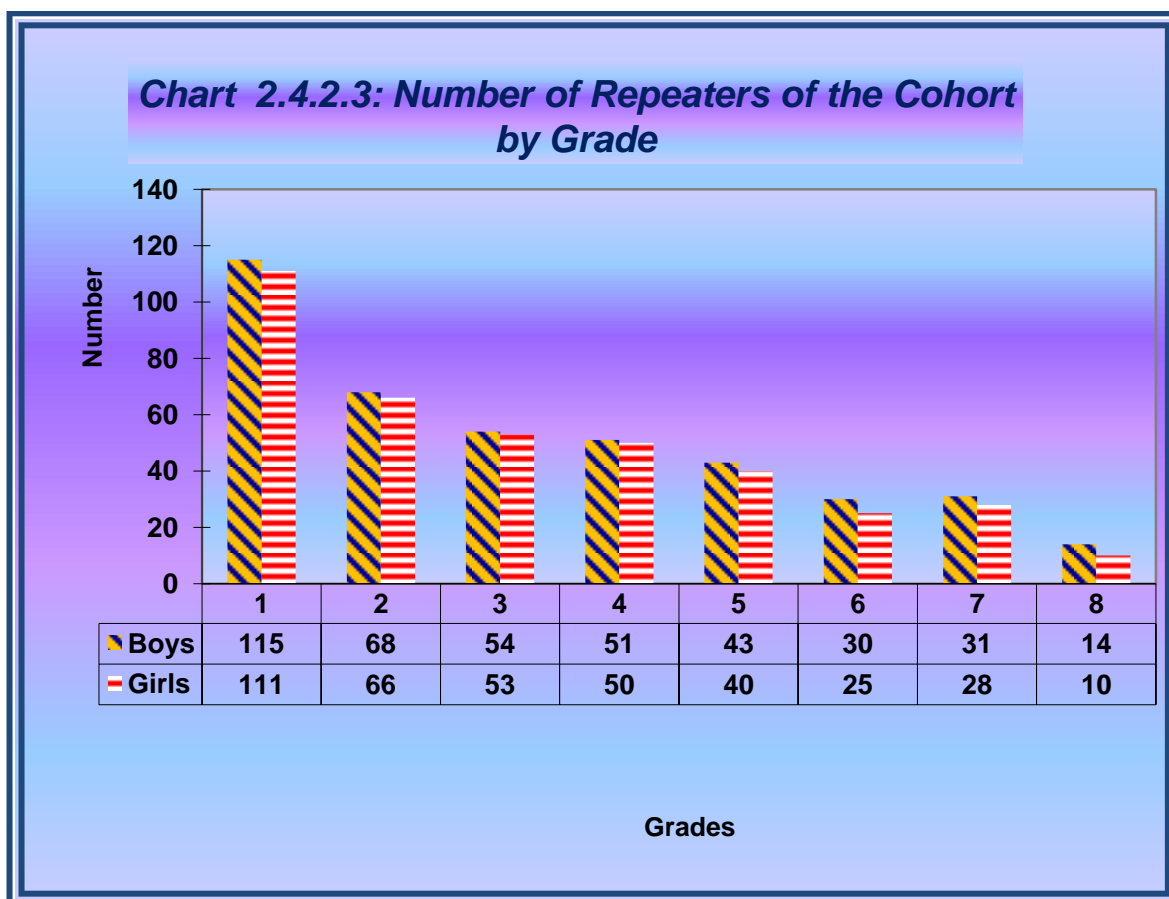

Table 2.4.2.5: Number of Dropout by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	278	130	90	84	85	46	55	24
Girls	271	132	86	92	81	47	61	21
Total	275	131	88	88	83	47	58	22

c. Repeaters by Grade of the Cohort

The cohort data on the Table 2.4.2.6 shows that, among the cohort of 1000 pupils 103 of them repeated at grade one.

Table 2.4.2.6: Repeaters by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	115	68	54	51	43	30	31	14
Girls	111	66	53	50	40	25	28	10
Total	113	67	54	51	42	27	30	12

As Table 2.4.2.7 shows, 10.3 % of the cohort repeats at grade 1. The majority of children repeat in the early grades, compared to repeaters at the upper one.

Table 2.4.2.7: Percentage of Repeaters by Grade of the Cohort								
Sex	Grade							
	1	2	3	4	5	6	7	8
Boys	11.5	6.8	5.4	5.1	4.3	3.0	3.1	1.4
Girls	11.1	6.6	5.3	5.0	4.0	2.5	2.8	1.0
Total	11.3	6.7	5.4	5.1	4.2	2.7	3.0	1.2

d. Number of Graduates from the Final years of the Cohort

Graduates from the final year is the number of pupils who eventually graduate (Complete) from the final year of the cycle. In other words, those who successfully complete first cycle primary of 4 years of study and promoted to the first grade of second cycle primary (Grade 5). Otherwise, those who successfully complete second cycle primary of 8 years of study and promoted to first cycle secondary (Grade 9). According to the cohort, out of **1000** pupils registered in 2004 at grade one, 285 pupils will graduate grade 4 by 2007 E.C, without repeating any grade during their stay in school. Another 103 pupils will graduate grade 4 after repeating once and 23 of them graduated after repeating twice in any of the grades. Total number of graduates of first cycle primary for this cohort is 411.

Similarly 84 pupils will graduate grade 8 by 2011 without repeating, 58 pupils will also graduate grade 8 by 2012 by repeating once, finally 22 pupils will graduate grade 8 by 2013 by repeating any of the grade twice. Therefore, in primary schools of Oromia, the possible number of pupil graduates from the complete primary system or grade 8 is only 165. Accordingly, only about 16.5% of the pupils are complete primary education out of 1000 pupils of the cohort system., unfortunately about, 842 (84.2%) pupils of the cohort were left the system before completing primary education Therefore, Educational planners, policy makers, decision makers, stakeholders and communities must work towards finding the solutions to improve this huge gap.

3. Secondary Education Program

3.1. Equitable Access of Secondary Education

Access is the extent to which the secondary school age population is able to join this particular level of education. Equity implies a reduction in disparities based on gender (Male/Female) and geographical location (Urban/Rural). Equity also ensures that, all students in every school will be able to avail themselves of the services, technology, materials and the qualified teaching staff that able to achieve educational success. Besides, it indicates fairness in the distribution of opportunities for education, and is the main indicator that shows educational performance.

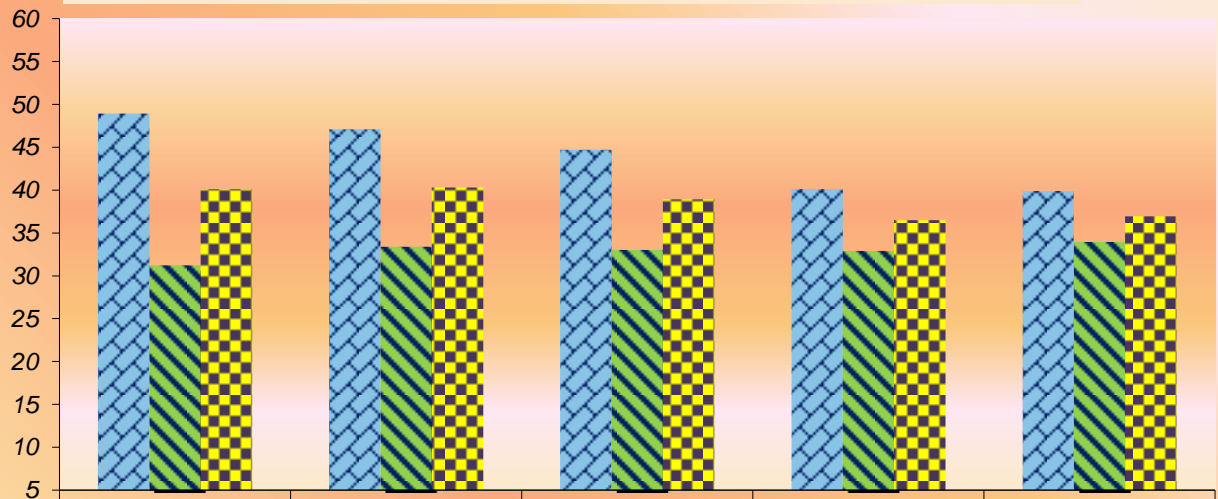

Secondary education is composed of two cycles. They are General Secondary Education (9-10) and Preparatory classes (11-12). General secondary education (9-10) is designed to continue the basic programs of the primary level, but the teaching is typically more subject focused and requires more specialized teachers for each subject area. The end of this level often coincides with the end of compulsory education. A preparatory class (11-12) is the final stage of secondary education and the entry point of higher institution. So that, instruction is often organized and even more along subject lines and teachers, typically need a higher or more subject-specific qualification. Let a look at different indicators of secondary education of our region.

3.1.1. Gross Enrolment Rate (GER) of General Education Grade (9-10)

GER of general secondary education (Grade 9-10) is the proportion of all enrolments regardless of age out of the school age population at this level. It compares the total number of students in the general secondary school with the school-age population of this level.

In Ethiopia, the official school age for secondary first cycle is 15-16 years old. As shown in chart, 3.1.1.1 the GER of secondary first cycle in 2001 E.C was 40.1% and then increased to 40.3% in 2002 E.C But, apparently the rate were slumped to 36.9% by 2005 E.C. the reason for the highly dropped of GER were not yet identified through research. However, whatever the reason was it needs serious attention from us.

Chart: 3.1.1.1: GER of Secondary First Cycle (grade 9-10) for the Last Five Years (2001-2005 E.C)

	2001	2002	2003	2004	2005

As shown from Table 3.1.1.1, the data demonstrate that, GER of 2005 E.C is 36.9% for secondary school (9-10) at regional level. From the some table there are also eight Administrative towns that are having GER greater than 100%. Even though the cause didn't identified with basic research yet, the major suspected reason behind, how GER of those administrative towns exceeds 100% was that, students who are living in surrounding those zones came to those towns to attend their high school education. Therefore, this may led to the increment of enrolment in secondary education. So that, when the rate were calculated in respect of school age population of those towns it may exceed more than the expected rate.

3.1.2. Net Enrolment Rate (NER) in First Cycle Secondary (9-10)

For this level, we consider students enrolled in first cycle secondary whose age is (15-16) and compare it to the total number of population belonging to the mentioned age group. Chart 3.1.2.1 below indicates the NER of the past five years. For example at 2001 E.C. the NER of secondary (9-10) was 15.3% and rose to 17.0 % in 2005 E.C. As the data indicates NER of the level didn't show significant change during the last five years, so that the issue needs attention from the educational officials and concerned bodies.

Chart: 3.1.2.1: NER of Secondary First Cycle for the Last Five Years (2001-2005 E.C)

Year

Table 3.1.2.1 shows NER of secondary (9-10) education at regional level by 2005 E.C. is 17.2%. Seven zones and all administrative towns have registered above the regional NER. Whereas, eleven zones of the region are registered less than the regional average. Therefore, the issue needs attention to improve this huge gap in these zones in particular.

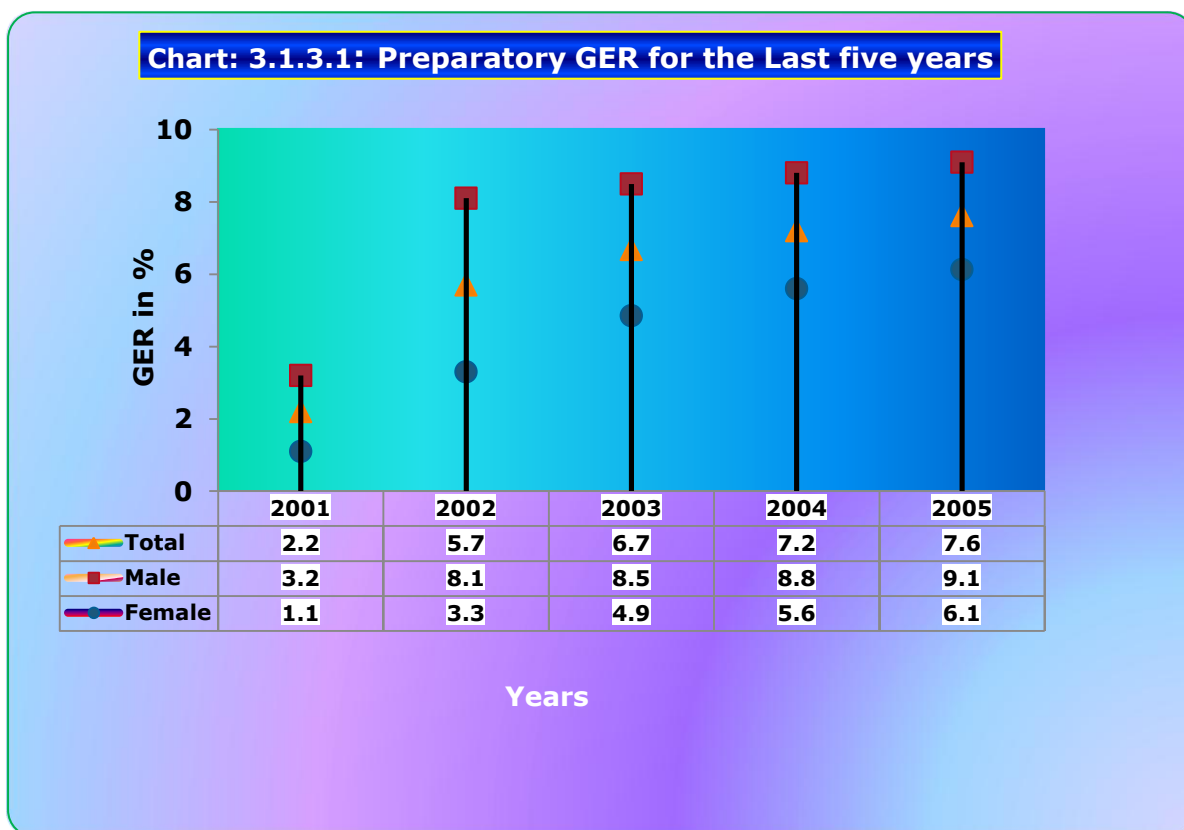

Concerning to gender gap, table 3.1.2.2 shows better improvement in the last five years. The gender gap of (9-10), dropped from 17.7% in 2001 E.C. to 6.0% in 2005 with AAGR of 31.0%. Whereas, the gender gap of (11-12), decline from 5.6% in 2001 E.C. to 3.0% in 2005 with AAGR of 16.8%.

Year	GER Secondary (9-10)			GER Secondary (11-12)		
	Male	Female	Gender Gap	Male	Female	Gender Gap
2001	48.9	31.2	17.7	7.6	2	5.6
2002	47.1	33.4	13.7	9.5	5.2	4.3

2004	40.1	32.9	7.2	8.8	5.6	3.2
2005	39.9	33.9	6.0	9.1	6.1	3.0

3.1.3. Gross Enrolment Rate (GER) of Preparatory (Grade 11-12)

As shown in chart, 3.1.3.1 below, the GER of preparatory (11-12) shows a little improvement in the last five years interval. For example it was 2.2% at 2001 E.C and also increased to 7.6 % in 2005 E.C (2012/13) with the average annual growth rate of 36.3%.

As indicated on table 3.1.3.1, all administrative towns excluding Gelan/Town and six zones have GER greater than the regional average which is 7.6%. On the other hand, twelve zones are having less than the regional average. As the data indicates the issue needs special attention for improvement.

3.1.4. Net Enrolment Rate (NER) of Preparatory (Grade 11-12)

As shown in chart 3.1.4.1 below, NER of Preparatory schools (Grade 11-12) has steadily increased for the last three years. For example it was 1.9% in 2001 E.C. and then rose to 3.7% in 2005 E.C. with AAGR of 18.1%.

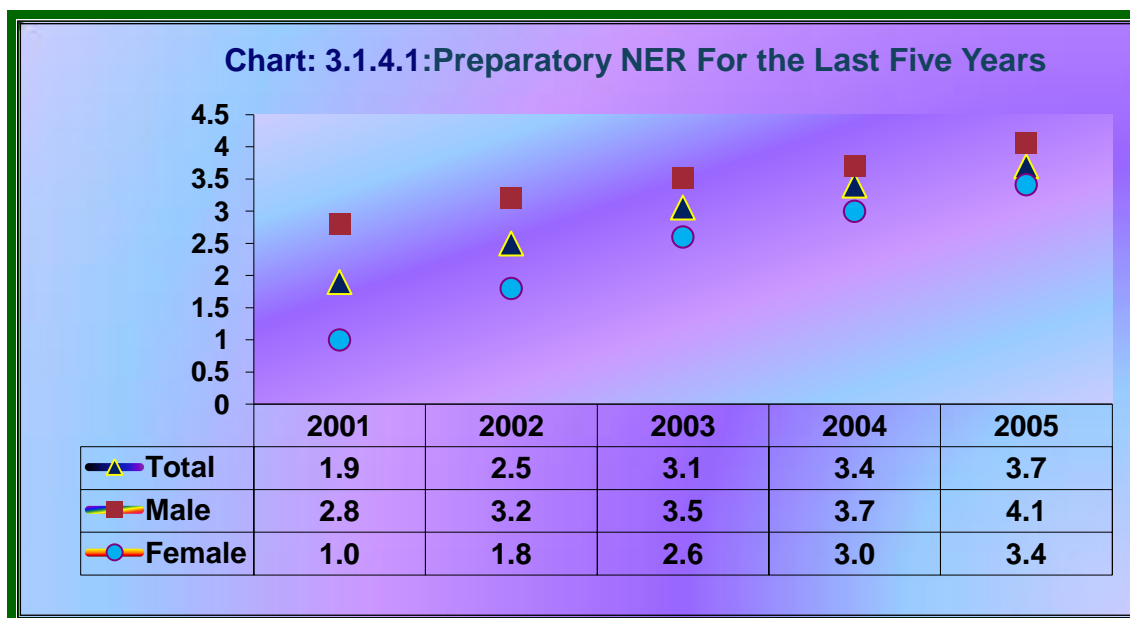

Table 3.1.4.1 also shows NER and GPI of 2005 E.C. As illustrated on the table, zonal and administrative town's level, NER is quite far apart from one to the other. Accordingly the three high NER registered administrative towns are Dukem, Bishoftu and Nekemte having 43.3%, 29.7 and 28.7% respectively. Whereas Jima, Guji and Hararge East zones are the three least NER registered zones having 0.7%, 1.2% and 1.7% respectively. Concerning gender equity index /GPI/, it has been 0.8 in 2004 E.C and this value is improved to 0.84 in 2005 E.C.

3.2. Quality of Secondary Education

One of the educational inputs that contribute a remarkable role to ensure quality of education is the availability of sufficient and qualified teachers. When compared to the primary education, the percentage and student to teacher ratio is better than that of secondary education in the region.

3.2.1. Percentage of Qualified Secondary School Teachers

The minimum qualification required for first cycle and second cycle secondary school teachers are BA/BSc/ or BEd As shown from table 3.2.1.2 the percentage of qualified teachers for first cycle (9-10) and second cycle secondary (11-12) of 2005 E.C (2012/13) were, 89.8% (90.1% male and 87.9% female) and 93.6% (94.2% male and 86.9% female) respectively. As illustrated from the same table percentage of qualified teachers of the zones and administrative town are varies from each other.

3.2.2. Ratios in Secondary Education

3.2.2.1. Student to Teacher Ratio

As shown on the table 3.2.2.1.1 at 2005 E.C (2012/13), Pupil to Teacher ratio of secondary education school of grade (9-10 and 11-12) was 1:32 and 1:25 respectively. As data shows Gelan/Town, Illu Aba Bora and Borena zones have the least Pupil to Teacher ratio in secondary first cycle /9-10/ that was 1:19, 1:25 and 1:25 respectively. At preparatory /11-12/ Lege Tafo/Town Guji and Jima zones are having the least teacher-pupil ratio with 1:9, 1:15 and 1:16 respectively.

3.2.2.2. Student-Section Ratio

As can be seen from chart 3.2.2.2.1 the trend of Student to teachers ratio for secondary first cycle /9-10/ shows improvement to fit the standard. By 2001 E.C. it has been (1:77) however it shows improvement in 2005 E.C by declining to (1:64). Additionally this table also shows the Pupil to Section ratio at zonal level too. Accordingly, from grade (9-10) Gelan, Nekemte and Lege Tafo among Towns and Bale from zones shows good improvement in regard to pupil to section ratio of the year.

As table 3.3.3.1 illustrates by 2005 E.C the repetition rate of secondary school /9-10/ at regional level was 12.2. Nevertheless, zones are having different value than the region. For

instance L/Tafo /L/Dhadhi, Gelan and Sebeta Towns have registered the lowest repetition rate, 2.1%, 2.2% and 5.1% respectively. Whereas; Sululta/Town, Guji and Hararge East zones are registered the highest repetition rate of 24.0%, 20.3% and 20.2% respectively. This table also elaborates the repetition rate in preparatory school by indicating repetition rate of 2.63% at regional level. This data have difference in values in all over the zones and Administration towns of the region. For instance Shoa South West, Asela Town and Hararge East are having the highest repetition rate of 5.6%, 5.4% and 5.0% respectively. On the other hand Sululta, Dukem, Gelan and L/Tafo /L/Dhadhi/Towns are also having zero repetition rates.

Regarding to dropout, as table 3.3.1.1 demonstrates, it is 22.6 % and 11.0% of grade 9th and 11th at Regional level respectively. The three zones that are having large dropout rate of grade 9th are Gelan/Town, Guji and Hararge West zones having 40.6%, 35.1% and 34.6% respectively. For grade 11th the highest dropout registered in Jima, Kelem Welega and Shoa South West zones that are 25.5%, 19.4% and 18.3% respectively as well. On the other hand the three zones that are having least dropout for grade 9th are Asela /Town/, Horo Gudru Welega and Sululta/Town which is 14.8%, 11.3% and 3.6% respectively. Concerning to grade 11th Sebeta, Dukem and Sululta Towns are having the least dropout rate which was 6.6%, 6.6% and 4.5% respectively.

4. Alternative Basic Education and IFAL Program

Basic education is the whole range of educational activities taking place in various settings (formal, non-formal and informal) that aimed to meet basic learning needs. In Dakar Framework, the term is having an implication similar to the broad EFA agenda. The program should receive wide spread public support for reasons that include considerations of literacy as fundamental human right. As the fact indicates illiteracy accompanies poverty and a low life expectancy.

Alternative Basic Education (ABE) is intended to address the Primary education needs of children who are substantially older than primary school ages of 7-14. Moreover, ABE enrollments have contribution in reporting GER and NER of 1st cycle primary with regular program. In paying attention for the issue, our region has planned to reduce illiteracy in this regard, even though great efforts have made to meet the access, still hard work is expected to attain the plan. In this publication under this title we attempted to specify the data of Alternative Basic Education (ABE) and Integrated functional adult literacy (IFAL) program.

Table 4.1: Number of Adults and children in Basic Education for the Last Four Years						
Year in EC	Number of Adult			Number of ABE Children		
	Male	Female	Total	Male	Female	Total
2002	112089	59676	171765	101460	82443	183903
2003	175045	110679	285724	91032	74286	165318
2004	814485	526267	1340752	71978	58353	130331
2005	883183	559734	1442917	85424	67482	152906

As indicated on table 4.1: Enrolment of Adult Education has increased by 103% (162.6%, 110.8%) of AAGR (Average Annual Growth Rate) in the past four years as total, male and female respectively. Whereas ABE enrolment was decline from year to year, this might be taken as the indicator of the assumption that as the enrolment in ABE as out of school children join the regular schools than ABE centers the participation of children in ABE program is decreases from year to year. Nevertheless, the cause of decrement of ABE

enrolment in the past four years might not be such assumptions, because of different reasons. For example practically millions of out of school children are still not joining the school system in our region. Accordingly, even though basic research didn't attempt to identify the cause yet, our assumption for the challenges happened might be; low community participation, low supervision and low follow-up of education sector at grass-root level, less interest and motivation of ABE facilitators, low participation of NGOs (both local and international) to promote the ABE program in the region and the like are the expected assumptions. So that, policy makers, planners and the concerned body might have serious concern to fill all the gaps to attain UPE accordingly.

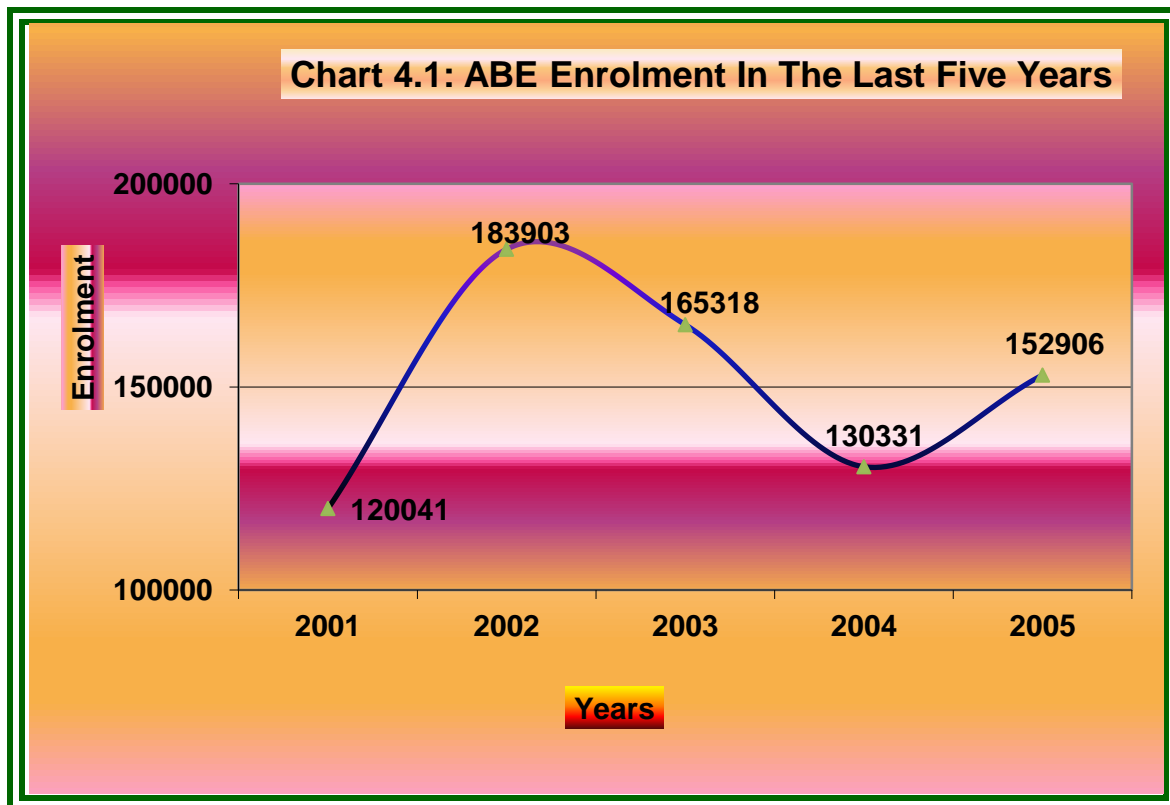

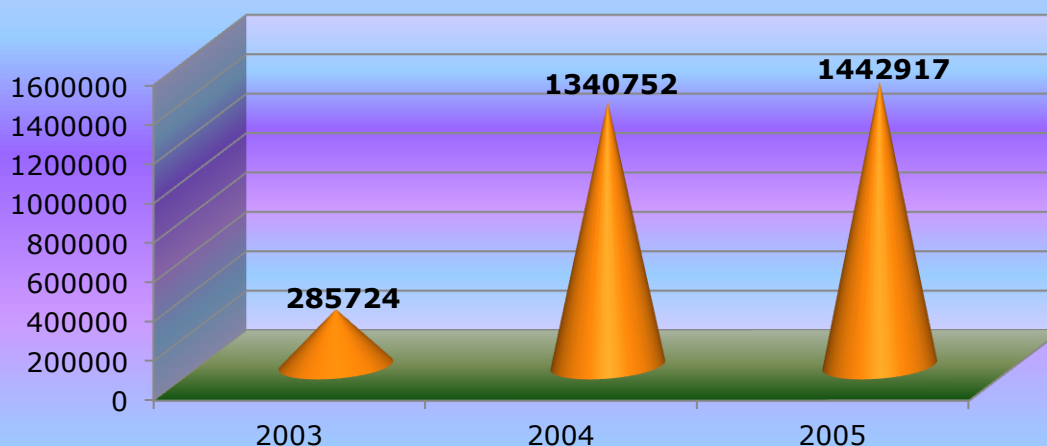

Chart 4.2. IFAL Enrolment In The Last Three Years
